SUBMIT YOUR COVID TEST

Testing after Spring Break

While vaccination does protect you from getting severely ill with COVID-19, some people who are fully vaccinated against COVID-19 still can contract and spread the virus. Should you display any COVID-19 symptoms, it is important that you get tested to find out if you are COVID positive and to get the proper treatment. The role of testing is to identify if you have COVID-19 so that you can get the healthcare attention you need. In addition, knowing that you are tested positive for COVID-19 will allow you to take necessary measures such as home quarantine and to stop transmission.

WAYS TO TEST

HOME TEST KITS
