ABET
Self-Study Report
for the
Industrial Engineering Program
at
Navajo Technical University
Crowpoint, New Mexico

July 1, 2017

CONFIDENTIAL

The information supplied in this Self-Study Report is for the confidential use of ABET and its authorized agents, and will not be disclosed without authorization of the institution concerned, except for summary data not identifiable to a specific institution.

B. Program History

Navajo Technical University was chartered by the Navajo Nation in 1979 as the Navajo Skill Center and sought to meet the needs of its unemployed population. After expanding the school’s mission, the Center was renamed Crownpoint Institute of Technology in 1985. Subsequently the name was changed to Navajo Technical College in 2006 and to Navajo Technical University in 2013 when our first graduate program was inaugurated in Diné (Navajo) studies. The NTU Industrial Engineering program started in the spring of 2012 with one Instructor, our present Dean of Instruction Dr. Casmir Agbaraji. We now have our first three graduates, one graduating in Fall of 2015, one graduating in Spring of 2016 and one in Fall of 2016. One more graduate is anticipated in Summer 2017, one in Fall 2017 and another in Spring 2018. This will be our first general review and are requesting that this review be retroactive by two years as allowed under ABET rules. All previous graduates have been made aware of deficiencies under ABET rules of their previously awarded degrees and told how to rectify that. We have had some slight changes of curriculum since the program was originally going to be launched as a Mechanical Engineering program and have incorporated more Industrial Engineering specific courses with a few curriculum changes. A curriculum revision was done in Spring of 2016 to bring the program into better alignment with ABET guidelines. No further changes are contemplated a this time except to begin requiring students take the FE exam for further assessment and to allow ‘Special Topics’ courses to occasionally be offered.
C. Options

At the moment there is only one track for Industrial Engineering, a Bachelor’s of Science in Industrial Engineering. A Pre-Engineering Certificate program was developed in 2015 through a NSF TCUP award titled NTU Pathways to STEM Careers. The objective of the certificate was to establish a pipeline from American Indian serving high schools in the NTU region to college and onto careers in STEM fields by offering dual credit courses via e-learning methods including Distance education as well as web based learning via the Moodle Learning Management System. The certificate was approved by the NTU Board in November 2015.

The purpose of the Pre-engineering Certificate program was to allow high school students to take some of the early engineering courses they would need to start in the Industrial Engineering program, the Electrical Engineering program or to start an engineering program at another school. Currently, we are creating an Associate’s Degree in Engineering Technology to introduce a 2 + 3 program, where students would take courses from the Industrial Engineering, Electrical Engineering and Advanced Manufacturing Technology programs along with General Education classes. This will allow students who are interested in engineering and technology to be able to sample the different programs available prior to their choosing one or create credits that would be transferrable to other colleges which have programs that the students would like to study. It would also still fulfill the goal of preparing students who would like to study engineering at another school.

D. Program Delivery Modes

The present delivery methodology is slanted heavily toward traditional lecture/laboratory methods with most engineering classes only offered 8 AM-5 PM Monday through Friday. This reflects the reality of a small faculty and the fact that many students have to use the Navajo Transit System or other modes of transportation. The Navajo Transit System which effectively leaves students at the Crownpoint campus before 8:00 A.M. and picks them up after 5:00 P.M. on Monday through Thursday. Friday classes are sometimes difficult to organize because of the lack of public transportation availability on that day.

In the Fall of 2017, NTU is planning to offer engineering classes by Distance Learning methodology and to have more online classes. Once the distance education program is fully implemented, students can enroll at NTU from off-campus computer labs at area high schools or industrial concerns or at home for at least the first two years of classes. We are hoping to have our first home-grown Distance Learning (Virtual Presence) classes, ENGR-103 Introduction to Engineering and ENGR-123 Computer Skills for Engineers in Fall of 2017.

E. Program Locations

Utilizing an NSF grant we are planning to be able to offer some of the IE curriculum through Distance Learning at the Chinle Instructional site and Introduction to Engineering through Distance Learning to several High Schools in New Mexico in conjunction with our Certificate programs, Pre-engineering and Industrial Maintenance. Eventually this will also be offered at the
Teec Nos Pos campus, but before that is possible a major upgrade of the internet resources there must be accomplished.

F. Public Disclosure

Program Education Objectives (PEOs), Student Outcomes (SOs), annual student enrollment and graduation data is posted on the NTU website at:

http://www.navajotech.edu/academics/degree-programs/bachelor-of-science/industrial-engineering

G. Deficiencies, Weaknesses or Concerns from Previous Evaluation(s) and the Actions Taken to Address Them

The IE Program's accreditation status is currently "in-process". A self-study report was submitted to ABET in November 2016 with an anticipated on-site accreditation visit scheduled for November 1st 2017. The IE Program has graduated two BSIE majors in May 2015 and December of 2015 with two anticipated in August of 2017 and two in December of 2017. This is our first request for an ABET evaluation of the program.

The objective is to summarize our efforts to update and assess our Industrial Engineering (IE) program educational objectives (PEOs) and student outcomes (SO) and to demonstrate continuous improvement with measurable results. In the past, before NTU applied for the ABET accreditation; we had developed Program Educational Outcomes (PEO) and Student Outcomes. However, in 2016 at the suggestion of our consultant, Dr. Susan Schall, we adopted the standard ABET a-k student outcomes since these were essentially the same as our previous outcomes and this would avoid confusion.
GENERAL CRITERIA

CRITERION 1. STUDENTS

A. Student Admissions

Navajo Technical University has an open admissions policy. Students are considered as officially enrolled in Industrial Engineering after successfully completing one of the following:

1) NTU Pre-Engineering Certificate with a GPA of 2.0 or higher
2) One semester of full-time study (minimum 12 credit hours) with a GPA $\geq 2.5$ or higher which includes ENGR-103 Introduction to Engineering
3) One semester of full-time study (minimum 12 credit hours) with a GPA $\geq 2.5$ which includes two STEM classes, having previously taken ENGR-103 Introduction to Engineering and passed with a grade of “C” or better

Students may take Industrial Engineering classes at any time since some other programs require classes that are taught within the IE program.

Navajo Technical University Admission Requirements for Bachelor Programs
- Freshman and Transfer students are required to have a cumulative GPA of 2.5 in High School or from the transferring school or will be provisionally admitted into the Bachelor program
- All students must maintain a cumulative GPA of a 2.0 once in the program
- Must not be on academic probation for the first two semesters
- Complete all prerequisites in the degree program
- Complete all General Education requirements and the 100-200 level courses within the first five semesters of the Bachelor Program

B. Evaluating Student Performance

Student performance is monitored by professors in individual classes via pre- and post- tests, homework, quizzes, tests, rubrics and projects. Most engineering classes use a final project so that students can demonstrate the ability to assimilate information from the course and combine it together to demonstrate design knowledge.

Grading Standards
The letter grade of A, B, C, indicate passing grades; a grade of D, however, is not transferable to another school nor does it allow the student to progress to the next level course in that subject area at NTU. A grade of incomplete (I) is not considered a passing grade and doesn’t result in earned credits until converted to an A, B or C.
Grading System
The following letter grades and grade points are used at NTU:

Table 1.B.1 Grades for NTU Engineering Students

<table>
<thead>
<tr>
<th>Letter Grade</th>
<th>Precentages</th>
<th>Description</th>
<th>Grade Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>90 - 100%</td>
<td>Excellent</td>
<td>4</td>
</tr>
<tr>
<td>B</td>
<td>80 - 89.9%</td>
<td>Above Average</td>
<td>3</td>
</tr>
<tr>
<td>C</td>
<td>70 - 79.9%</td>
<td>Average</td>
<td>2</td>
</tr>
<tr>
<td>D</td>
<td>60 - 69.9%</td>
<td>Below Average</td>
<td>1</td>
</tr>
<tr>
<td>F</td>
<td>Less than 60%</td>
<td>Failure</td>
<td>0</td>
</tr>
<tr>
<td>I</td>
<td>Incomplete (No Credit)</td>
<td>None</td>
<td></td>
</tr>
<tr>
<td>W</td>
<td>Withdrawal</td>
<td>None</td>
<td></td>

<td></td>
</tr>
<tr>
<td>CR</td>
<td>Credit by Examination</td>
<td>None</td>
<td></td>
</tr>
<tr>
<td>P/F</td>
<td>Pass/Fail</td>
<td>None</td>
<td></td>
</tr>
</tbody>
</table>

Incomplete: An “I” may be issued when unforeseeable circumstances beyond the student’s control prevent the student from completing course requirements. Incomplete grades will not be authorized when the student has failed to complete course requirements or has earned a failing grade due to personal negligence. An incomplete grade must be converted to a credit grade by satisfactorily completing the required assignments within the adjusted deadline (arranged between the instructor and student) of the following semester. A student does not have to reregister for the course if completed within the stated deadline. The incomplete grade must be converted by the next semester otherwise the “I” will automatically convert to an “F”. The instructor must complete and submit an Incomplete Form to the Registrar’s office.

Audit: An Audit (AU) is awarded for class participation and does not indicate proficiency in the subject matter. Course credit is not included in the GPA or cumulative GPA. Forms are available at the Registrar’s Office. Audit courses accumulate charges as a regular course. Audit courses are counted towards attempted hours but not eligible for federal student aid.

Credit by Examination: Credit and grade are given upon completion of examination of a course that is challenged by the student. Only a grade of CR is recorded on the student record if the examination is passed with an 80% or higher. Students may not have attempted the course at the university. The responsibility for preparing for these examinations is entirely on the student. The current tuition rate per credit hour applies before examination. The student request for challenging the course may be picked up from the Registrar’s Office.

Course Withdrawal: Used for student, instructor and/or administrative withdrawals from a course before the withdrawal deadline date.
Pass/Fail: some courses are graded on a pass/fail basis and will not be included in the computation of the GPA.

C. Transfer Students and Transfer Courses

Transfer Student Admissions
Students must indicate all institutions previously attended on their application.

- Official transcripts must be in a sealed envelope and preferably mailed directly from the institution to the NTU Registrar’s Office. Institutions that send Electronic Transcripts are to be emailed directly to the Registrar only for it to be official. Note: Transfer courses are not included in calculating the student’s NTU cumulative Grade Point Average (GPA).
- A Transfer Student who does not have a cumulative grade point average of 2.00 or on academic suspension will be referred to the Academic Counselor to be placed on an academic contract or education plan.

Transfer Credit Evaluation
Credits earned at regionally accredited institutions of higher learning are accepted. Pre-college credits are not transferable. Transfer credit will not be given without an official transcript.

- Transfer credit will be awarded for each college course level in which the student received a grade of “C” or higher.
- A limit of 30 credit hours may be transferred toward an associate degree and a limit of 15 credit hours may be transferred toward a certificate program. Students in the bachelor degree program who request to have their courses transferred will have a limit of 60 credit hours eligible for transfer.
- The courses must be taken within the ten year time limit of admission into the college. Credits over ten (10) years of age are subject to review prior to acceptance toward prerequisites and/or degree requirements in some program areas.

Transfer Credits
Coursework taken at another institution that is accepted and officially transfers as transfer credit by NTU will count as both attempted and completed credit hours toward pace and maximum timeframe. Students who exceed the maximum timeframe can submit a SAP (Satisfactory Academic Progress) Appeal to determine if their aid can be reinstated.

D. Advising and Career Guidance

Advisement
All students enrolling have options to meet with a Program advisor or an Academic Advisor/Counselor

- All certificate and degree seeking students are required to consult with their assigned program advisor before registering for classes. These advisors plan student schedules by following the program checklist and provide guidance throughout their academic enrollment
• New or undecided students may see the First Year Experience Academic Advisors in the Counseling office

Academic Advising
The Academic Counselor coordinates with the First Year Advisor to assist in evaluating student’s abilities and interests to develop realistic academic and career goals. Advisement includes educational planning, choosing a major, planning for a certificate, an associate or baccalaureate degree, and planning strategies for academic success. The counselor provides Accuplacer placement test interpretation for appropriate placement in Math and English courses. The counselor works with students placed on academic probation and a student readmitted on academic suspension and places them on contracts to work toward raising their cumulative grade point averages to include support services such as tutoring. The counselor monitors and meets with faculty to assess the progress of the student. The counselor also conducts academic support workshops. Mr. Whiting is the only official Industrial Engineering (IE) advisor for all industrial engineering students. However the new Industrial Engineering Professor hired in the summer of 2017 will also be an official advisor. Some students come to Mr. Whiting for advice on class registration and personal matters. Students can also register online for classes.

First Year Experience (FYE)
The First Year Program has been developed to strengthen the retention rate, to improve operational efficiencies and enrollment, and the long-term success of first-year students at Navajo Technical University. The Advisor and Counselor coordinate to meet with first-year students. They evaluate the student’s abilities and interests to develop realistic academic and career goals. The FYE staff provides Accuplacer placement testing and interpretation for appropriate placement in math and English courses. Advisement includes educational planning, choosing a major, planning for certificate, associate, or bachelor degree, and planning strategies for academic success. Richelle Henderson is the Career & Academics Advisor for the First Year Experience.

Career Advisement, Job Placement and Internship
Career advisement is offered to provide guidance to students in selecting a career path and a corresponding academic program at NTU. The career advisor uses a computer-based pre-assessment test to evaluate an individual’s personality, interests, skills, and aptitude in order to identify his/her career competencies. Students engage in an interactive process that builds self-knowledge and assists them in developing an employment portfolio. We will also assist students in assembling an employment portfolio including a resume, documented accomplishments, pertinent awards and certificates, and a reference list. Mr. Whiting also advises students on career paths and plans; his experience in Industry as an engineer, manager, and consultant helps students think how to achieve the goals that they have set. The Career and Internship Counselor, Juanita Tom, assists students with career advice and the Job Placement Coordinator, Lemanuel Loley, works with students on finding jobs.

The Industrial Engineering program requires an internship where students have the opportunity to apply practical, job-specific skills in an actual work situation in cooperation with government or businesses in the private and public sectors. Students must complete an internship to qualify
for graduation. The student must meet with the faculty advisor to begin the process of submitting documents and officially registering for the course with the Registrar’s Office.

E. Work in Lieu of Courses

NTU does not presently accept life experience in lieu of course work. If students have taken a higher level class before, they are allowed to test out of those lower classes or continue where they left off.

Dual Credit

Outstanding high school students can be admitted to NTU prior to high school graduation. Early admissions must be made directly to the Registrar unless otherwise articulated through an agreement with a local high school or school district.

The requirements for Dual Credit or High School admission are:
- Written recommendation from the high school principal/counselor
- Current High school transcript with cumulative GPA as follows:
  - Junior – 3.5 minimum GPA required (or top ¼ of class)
  - Senior – 3.0 minimum GPA required (or top ¼ of class)
- A completed admission application
- Accuplacer test result
- Certificate of Indian Blood (CIB) or an official record of enrollment that indicates membership with a federally recognized Indian Tribe
- Signed NTU Alcohol and Drug Free Policy affidavit
- A signed parental permission form

No student below the junior level of high school will be admitted. An accepted student must follow the same academic guidelines required by the University and must maintain a “C” or better grade in all classes taken at NTU and cannot enroll in more than two (2) classes without special permission. Note: these students are responsible for payments of tuition and fees.

Military Credit Evaluation

Military service credit is granted based on recommendation of the American Council of Education’s “Guide to the Evaluation of Educational Experiences in the Armed Service” and institutional policies. No credit is granted for military Occupational Specialty (MOS). To apply for military credit, a submitted copy of the DD214 and a copy of any applicable training not listed on the DD214 to the Registrar’s Office.

Independent Study

Under unusual or special circumstances a student and instructor of a regular University course may adapt the course to an Independent Study. The arrangement is subject to approval of the Department Chair and the Dean of Instruction. Registration for an independent study course must be completed and approved no later than the last day of Drop/Add. Department Chairs will determine which courses are eligible for Independent Study. Forms are available at the Registrar’s office.
A full time faculty member may supervise and offer an independent study course during a semester or summer session and is restricted to no more than two graduating students. No more than six credits hours may be taken in any one semester.

- The student must agree in writing to a syllabus that outlines the learning objectives, texts, course requirements, evaluation criteria, meeting dates and examination dates for the course. A final assessment or examination is required for independent study courses. However, the role of final examinations for independent study courses may vary based on the intended outcomes for the course. Department Chairs can approve a nontraditional final examination in such cases (e.g., a portfolio of the student’s work, a thesis or substantial paper, a take-home examination).
- Students should devote a minimum of three hours each week for each credit hour of independent study, or at least nine hours per week for a three-credit independent study course.
- The student has a term grade point average at least 2.50 from previous term.
- The student should not be on academic and financial aid probation status during the semester that the student would take the program course through independent study.

F. Graduation Requirements

A Bachelor’s of Science in Industrial Engineering (BSIE) requires 123 credit hours and is designed for a four-year program of study. Students in the baccalaureate degree programs are required to complete a minimum of 30 credit hours in the upper division, i.e., 300 and 400 level courses before they can graduate. The minimum credit load for a full-time student is 12 credit hours per semester.

- General Education Requirements: 19 Credits
  - ENG-110: Freshman Composition (3); NAV-101 or 201: Navajo Language (4); HUM-170: History of Native Americans in Media (3); ENG-111: Composition & Research (3); HST-211: Am. Hist. 1877 to present (3); COM-130: Public Speaking (3)
- Mathematics and Sciences: 32 Credits
  - MTH-162: Calculus I (4); ENGR-169: Basic Statistics and Probability (3); MTH-163: Calculus II (4); CHM-120: General Chemistry I (4); ENGR-236: Inferential Engineering Statistics (3); PHY-111: Algebra-Based Physics (4); MTH-410: Linear Algebra (3); MTH-310: Differential Equations (4); IE-363: Design of Experiments (3)
- Engineering Design: 51 credits
  - ENGR-103: Introduction to Engineering (3); IE-235: Lean Production (3); IE-223: Design & Manufacturing Processes I (3); ME-345: Statics (3); ENGR-313: Engineering Economics (3); ME-353: Fluid Mechanics (3); IE-323: Human Factors in Product Design (3); IE-343: Design & Manufacturing Processes II (3); IE-380: Project Management (3); ME-354: Thermodynamics (3); IE-413: Quality Control (3); IE-433: Metrology & Instrumentation (3); IE-453 Engineering Optimization (3); IE-424: Capstone (3); IE-463: Facility Planning & Design (3);
IE-473: Inventory Control & Production Plan (3); IE-494: System Simulation (3); and Technical Elective (3)

- Core IE Requirements: 18 Credits
  - ENGR-123: Computer Skills for Engineering (3); IT-105: Introduction to Programming (3); ENGR-130: Engineering Graphics (3); ENGR-143: Characteristics of Engineering Materials (3); ENGR-230: Advanced Engineering Graphics (3); and IE-312: Summer Internship (3)

- Technical Electives: 3 Credits selected from the following:
  - AMT-311: Laser Scanning Methods (3); AMT-370: Robotics & Offline Programming (3); IE-483: Rapid Prototyping (3); PHY-121: Calculus Based Physics (3); and Special Topics in IE or Course approved by advisor (3)

NTU uses a degree checklist to enable students to check their progress and to confer with the Adviser or Registrar’s office in case of problems or to ascertain if courses count against program requirements. Before graduation the Registrar’s Office checks that all courses and requirements are met. If course substitutions are allowed they are documented to avoid potential problems.

The current 2016 degree checklist is included below:
### Educational Requirements

This checklist is to be used as information and NTU reserves the right to change at any time without notification.
G. Transcripts of Recent Graduates

The program will provide unofficial transcripts of program graduates to date. A transcript from our first ABET eligible student is included in the application package with instructions to interpret it and a checklist to show attainment of ABET goals.
CRITERION 2. PROGRAM EDUCATIONAL OBJECTIVES

A. Mission Statement

Navajo Technical University’s mission is to provide university readiness programs, certificates, associate, baccalaureate, and graduate degrees. Students, faculty, and staff will provide value to the Diné community through research, community engagement, service learning, and activities designed to foster cultural and environmental preservation and sustainable economic development. The University is committed to a high quality, student-oriented, hands-on-learning environment based on the Diné cultural principles: Nitsáhákees (Thinking), Nahátá (Planning), Īína (Implementing), Siihasin (Reflection).

Industrial Engineering Mission Statement:
The mission of the Industrial Engineering program at Navajo Technical University is to provide the best possible education, research, services, and resources to prepare students for careers in industry, research or academia and to achieve success in life.

B. Program Educational Objectives

The program objectives can be found in the general catalog and the program website both available at:

http://www.navajotech.edu/academics/degree-programs/bachelor-of-science/industrial-engineering

Our industrial engineering alumni will show that they meet expectations by performing within one or more of these parameters in five to seven years after graduation:

1. Show progress in their career through greater supervisory tasks, advancing to larger managerial responsibility or increasing technical accountability.

2. Acquire professional engineer’s license, other certifications of expertise in technical areas or attend graduate school in an appropriate technical discipline.

3. Demonstrate success by continuing employment and/or technical accomplishments as entrepreneurs, civil servants or in commercial or industrial endeavors.

C. Consistency of the Program Educational Objectives with the Mission of the Institution

As a new program in a new university the program educational objectives were selected to align with key elements of the mission of the university. That is to provide value to the Diné community through research, community engagement, service learning, and activities designed
to foster cultural and environmental preservation and sustainable economic development. This includes success in gaining relevant and fulfilling employment and the readiness to pursue graduate education.

The Industrial Engineering program fulfills the first portion of the mission of Navajo Technical University by providing the baccalaureate program B.S.I.E to members of the Navajo Nation. The Program Educational Objectives specifically align with the other portions of the NTU mission statement as follows:

**Program Educational Objective #1:** All graduates will show progress in their career through greater supervisory tasks, advancing to larger managerial responsibility or increasing technical accountability.

This objective supports and aligns with the following portion of the institutional mission statement “… designed to foster … and sustainable economic development.”

**Program Educational Objective #2:** All graduates will acquire professional engineer’s license, other certifications of expertise in technical areas or attend graduate school in an appropriate technical discipline.

This objective supports and aligns with the following portions of the institutional mission statement “Navajo Technical University’s mission is to provide … and graduate degrees to members of the Navajo Nation.”

**Program Educational Objective #3:** All graduates will demonstrate success by continuing employment and/or technical accomplishments as entrepreneurs, civil servants or in commercial or industrial endeavors.

This objective supports and aligns with the following portion of the institutional mission statement “… designed to foster cultural and environmental preservation and sustainable economic development.”

There are few economic opportunities available to most Navajo communities. Engineering schools have historically served as the engines of economic opportunity and prosperity in many parts of America. The graduates of the NTU engineering programs will have the capacity to contribute to sustainable economic development on Navajo.

**D. Program Constituencies**

As a Tribal University NTU has a much broader constituency than traditional universities in the United States. These include:
- Graduates of the program (Alumni).
- Employers of the graduates.
Graduates of the NTU IE Program (Alumni)

Graduates of the program will rely on the program to maintain ABET accreditation and build the quality and reputation of the program. Alumni will look to the program to be a destination for friends and family members and an agent in the betterment of life on Navajo.

A NTU alumni association is slowly developing. The IE program will encourage membership and participation of graduates in the Alumni group which will serve to represent this constituency.

Employers of NTU IE Graduates

Employers from across the United States will learn to find NTU as a source of well qualified Native American Industrial Engineers to help address the extreme shortage present in the work force. We have been working with Arizona Public Service (utility) and the Dine Raytheon facility, both of whom are interested in our graduates, particularly if ABET accredited.

The NTU Engineering Advisory Board (EAB) currently represents this constituency.

E. Process for Review of the Program Educational Objectives

Program Educational Objectives will not change often. The PEOs will be reviewed every year initially and then every three years thereafter by the Engineering Advisory Board (industrial and alumni advisory board). Formal assessment will be obtained through surveys of alumni every year initially and then every three years. We have made an alumni survey to be used and expect to launch that next year (Spring 2018) when we will have a more representative sample of graduates. The responses will be communicated to the Engineering Advisory Board, and the program faculty. The assessment data will be reviewed and revisions recommended for program enhancement from any or all of the groups. Objective changes will be approved by Engineering Advisory Board and program faculty before being instituted.

The process of Program Review through the use of assessment data is in the early stages at NTU. It was only in the 2014-2015 school year that NTU began discussing Program Review as opposed to individual Course Review. Since evaluation of Program Educational Objectives requires alumni feedback in the one to five year span, it will be a number of years before robust data begins to arrive.

<table>
<thead>

<td>Employers, industrial</td>
</tr>
<tr>
<td>discussions</td>
<td>meetings</td>
<td>representatives (possible employers)</td>
</tr>
<tr>
<td>-------------</td>
<td>----------</td>
<td>-------------------------------------</td>
</tr>
</tbody>
</table>

Results of the inputs to the PEOs are documented as part of the university assessment process by the Assessment Office. The program’s ABET coordinator also maintains assessment records on the program’s server. The coordinator, the chairperson, and the chair of the Curriculum Committee have direct access to these files.

The PEOs were originally established in fall 2015. Changes were made based on the advice of our ABET consultant and were approved by the Engineering Advisory Board in May 2017.

The survey and other instruments and the results of input methods defined in Table 2.E.1 will be available to the evaluation team in the resource room.
CRITERION 3. STUDENT OUTCOMES

A. Student Outcomes

Formerly the NTU IE program had its own student outcomes, but these were changed to the ABET a-k student outcomes since there was only a difference in the way they were worded. Every semester, the program is evaluated in terms of its attainment of the established student outcomes. Results of this periodic assessment (i.e., ABET evaluation) will be used as inputs in Educational Planning and Programming at NTU. These student outcomes, with their associated ABET criterion, are shown below.

(a) an ability to apply knowledge of mathematics, science, and engineering

(b) an ability to design and conduct experiments, as well as to analyze and interpret data

(c) an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability

(d) an ability to function on multidisciplinary teams

(e) an ability to identify, formulate, and solve engineering problems

(f) an understanding of professional and ethical responsibility

(g) an ability to communicate effectively

(h) the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context

(i) a recognition of the need for, and an ability to engage in life-long learning

(j) a knowledge of contemporary issues

(k) an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice
We have linked these student outcomes to performance indicators as given in Table 3.A.1 below.

<table>
<thead>
<tr>
<th>Table 3.A.1 Performance Indicators linked to Assessment of Student Outcomes</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>a</strong></td>
</tr>
</tbody>
</table>
|  | An ability to apply knowledge of mathematics, science, and engineering | 1. Chooses a mathematical model of a system or process appropriate for required accuracy  
2. Applies mathematical principles to achieve analytical or numerical solution to model equations  
3. Examines approaches to solving an engineering problem in order to choose the more effective approach |
| **b**  | An ability to design and conduct experiments, as well as to analyze and interpret data | 1. Observes good lab practice and operates instrumentation with ease  
2. Determines data that are appropriate to collect and selects appropriate equipment, protocols, etc. for measuring the appropriate variables to get required data  
3. Uses appropriate tools to analyze data and verifies and validates experimental results including the use of statistics to account for possible experimental error |
| **c**  | An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability | 1. Produces a clear and unambiguous needs statement in a design project  
2. Identifies constraints on the design problem, and establishes criteria for acceptability and desirability of solutions  
3. Carries solution through to the most economic/desirable solution and justifies the approach |
| **d**  | An ability to function on multi-disciplinary teams | 1. Recognizes participant roles in a team setting and fulfills appropriate roles to assure team success  
2. Integrates input from all teammates and makes decisions in relation to objective criteria  
3. Improves communication among teammates and asks for feedback and uses suggestions |
| **e**  | An ability to identify, formulate, and solve engineering problems | 1. Problem statement shows understanding of the problem  
2. Solution procedure and methods are defined  
3. Problemsolution is appropriate and within reasonable constraints |
| f | An understanding of professional and ethical responsibility |
|   | 1. Knows code of ethics for the discipline |
|   | 2. Able to evaluate the ethical dimensions of a problem in the discipline |
| g | An ability to communicate effectively |
|   | 1. Writing conforms to appropriate technical style format appropriate to the audience |
|   | 2. Appropriate use of graphics |
|   | 3. Mechanics and grammar are appropriate |
|   | 4. Oral: Body language and clarity of speech enhances communication |
| h | The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context |
|   | 1. Evaluates conflicting/competing social values in order to make informed decisions about an engineering solution. |
|   | 2. Evaluates and analyzes the economics of an engineering problemsolution |
|   | 3. Identifies the environmental and social issues involved in an engineering solution and incorporates that sensitivity into the design process |
| i | A recognition of the need for, and an ability to engage in life-long learning |
|   | 1. Expresses an awareness that education is continuous after graduation |
|   | 2. Able to find information relevant to problem solution without guidance |
| j | A knowledge of contemporary issues |
|   | 1. Identifies the current critical issues confronting the discipline |
|   | 2. Evaluates alternative engineering solutions or scenarios taking into consideration current issues |
| k | An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. |
|   | 1. Selects appropriate techniques and tools for a specific engineering task and compares results with results from alternative tools or techniques |
|   | 2. Uses computer-based and other resources effectively in assignments and projects |

**B. Relationship of Student Outcomes to Program Educational Objectives**

The mapping of Student Outcomes and the Program Educational Objectives is shown in Table 3.B.1. These relationships clearly indicate how students achieving program outcomes are prepared to attain our educational objectives.

CRITERION 4. CONTINUOUS IMPROVEMENT

Continuous improvement is accomplished through regular assessment, data review, and implementation of changes. Assessment is provided through a number of assessment vehicles, as described in Section 4.A.

A. Student Outcomes

The evaluation of and degree to which the learning outcomes for the Industrial Engineering program are met is accomplished by various assessment tools, direct/indirect and quantitative/qualitative.

Direct assessment methods are those where a conclusion can be reached directly from student submitted work, such as measurement of Student Outcomes a, b, c and e through homework, tests and/or projects where methods used and conclusions reached are easily interpreted and evaluated through a quantitative paradigm.

Indirect assessment methods are those where a conclusion is drawn inferentially from evidence observed, such as Student Outcome d where a Professor supervising student projects would be able to see which students functioned well in multidisciplinary teams or not. These evaluations are most often through rubrics for expected behavior demonstrated at each level of achievement.

Exemplary Performance is indicated by 100% scoring on Figures 4.A.1 through 4.A.10.

Satisfactory Performance is indicated by achieving 80 to 90% scoring on Figures 4.A.1 through 4.A.10.

Learning Performance is indicated by 60 to 70% scoring on Figures 4.A.1 through 4.A.10.

Performance Needing Improvement is indicated by anything below 60% scoring on Figures 4.A.1 through 4.A.10.

Table 4.A.1 is a summary of the Industrial Engineering student outcome assessment tools. In general, the responsible entities for the collection of data, analysis, and evaluation include the faculty, the Engineering Advisory Board, outside evaluators and the Dean of Instruction. Some of the methods are still being implemented in assessing the IE program.

Table 4.A.2 is a schedule of when different Student Outcomes are planned to be evaluated. This has also been applied to Table 4.A.3 where it is expanded to which outcomes are expected to be evaluated in which classes and in what years. This is true for all classes except Capstone, where we will try to be able to measure all Student Outcomes every time the class is held. All other courses we expect to measure a maximum of four outcomes per class with three outcomes being usual.
<table>

</tbody>
</table>

Data is collected every year and there is some activity which taking place on each outcome each year. The cycle of activity is shown in Table 4.A.4.

Results for each student outcome are reported in tables like the example for student outcome a in Table 4.A.5 These tables are completed as far as possible, but incomplete records from assessment in past years and poor evaluation techniques previously used limit their value. All supporting documentation is available in the ABET resource room at the time of the visit. Each table represents the activity for the current ABET accreditation cycle. Each outcome table includes performance indicators, courses and/or co-curricular activities that provide students an opportunity to demonstrate the indicator, where summative data are collected, timetable, method of assessment and the performance target. The first complete assessment cycles for the IE program was generated with the data from the Spring 2017 with the exception of Student Outcome ‘f’ which was evaluated from Introduction to Engineering in Fall 2016 term. The remainder of the first cycles was generated with the data from spring 2017. This Self-Study Report contains completed assessment for all student outcomes and includes graphs showing the results of attainment of the student outcomes as determined in the Engineering Assessment Committee meeting of May 15th and 16th.

Display materials available at time of visit in the ABET resource room will include:

- Rubrics used by faculty to assess the indicators
- Samples of student work
- Results of evaluations

Assessment Results Summary (2017): The results from Capstone show that students were in satisfactory level (80%) for Indicators a.1 and a.2, and students achieved learning level (70%) for Indicator a.3.
**Evaluation and Actions (2017):** Evaluation was performed during the Assessment Workshop on May 15 & 16. The department will ask faculty members to improve students learning related to Indicator a.3 on how to choose the most effective approach to problem solving. The new Rubric for evaluating Performance Indicators of Student Outcomes will be provided to faculty for guidance.

Figure 4.A.7 Capstone Results Summary for Student Outcome (g) 2017

- **Performance Indicator g.1 Writing**: Conforms to appropriate technical style format appropriate to the audience
- **Performance Indicator g.2 Appropriate use of graphics**
- **Performance Indicator g.3 Mechanics and grammar are appropriate**
- **Performance Indicator g.4 Oral**: Body language and clarity of speech enhances communication
- **Desired Attainment Threshold**
**Assessment Results Summary (2017):** The results from Capstone show that students achieved satisfactory level (90%) or excellent level (80%) for the Indicators g.1 and g.3. Indicators g.2 (60%) and g.4 (70%) are rated as needs improvement.

**Evaluation and Actions (2017):** Evaluation was performed during the Assessment Workshop on May 15 & 16. Indicator 2 showed insufficient ability to communicate through figures, drawings and graphs, which will be addressed in ENGR-123 and all design courses possible will require CAD type drawings. Information for Indicator 4 was that overall some students did not have good oral presentation skills. This will be addressed in ENGR-123. The new Rubric for evaluating Performance Indicators of Student Outcomes will be provided to faculty for guidance.

**Assessment Results Summary (2017):** The Capstone results show that students achieved needs improvement level (50%) for Indicator k.1. Indicator k.2 was at a satisfactory level (90%).

**Evaluation and Actions (2017):** Evaluation was performed during the Assessment Workshop on May 15 & 16. Faculty will emphasize using alternative techniques for comparisons in future. The new Rubric for evaluating Performance Indicators of Student Outcomes will be provided to faculty for guidance.

**Program Assessment**
The following is the Program Assessment form currently in use at NTU:
# Program Assessment

### Assessment Planning/Reporting Sheet

**Program:**

**Course #:**

**Semester:**

**Campus:**

**Instructor:**

Answer questions 1 – 5B for your Assessment Plan/proposal.

**Answer all questions for your Assessment Report.**

Please attach your syllabus, pre/post-tests, rubrics and graphs **in a separate file** identified with your name and the semester/year.

1. What is your program mission statement?
2. What are your program outcomes?
3. What is/are the program goal(s) you are going to measure?
4. What is/are the method(s) (direct or indirect, or both) you will use to measure your programs goals?
5. What are your pre-assessment outcomes?
   A. Number of students for pre-assessment: _______
   B. What is your expectation/benchmark?
6. What are your post-assessment outcomes?
   A. Number of students for post-assessment: _______
   B. Did your students meet your expectation/benchmark?
7. Based on your post assessment outcomes, what changes will you make in teaching methodology, **program outcomes**, or anything else to improve student learning?
8. How will your proposed changes continue to support your stated program goals?
9. Based on your conclusions from your post assessment outcomes, how are you going to improve your assessment activities?

**Benchmark:** ______ % students will meet or exceed expectation.

<table>
<thead>
<tr>
<th><strong>Exceeds Expectation</strong></th>

- Final:
(What percentage of the class do you expect to meet or exceed your expectation for the course?)

Final Result:  ____% Met or exceeded expectations
  ____% Did not meet expectations

B. Continuous Improvement

Our continuous improvement process has four components which derive from the Diné Philosophy of Education as illustrated in Figure 4.B.1.

**Figure 4.B.1 The Continuous Improvement Process NTU IE program**

**Nitsáhákees (Thinking)**

Our assessment cycle process has been shaped by the Diné Philosophy of Education. The first component is Nitsáhákees (Thinking), where we assess the outcomes and methods. Assessment is a process by which the engineering faculty and others investigate the data collected in the
evaluation process and review the efficiency of elements of the program. In the Fall of 2017 we will be presenting the Faculty with the new rubric using Performance Indicators for assessment. The evaluation component of the NTU IE continuous improvement process, includes the following input:

a. Answers to questions on Homework, Quizzes, Midterms and Finals  
b. Student Projects  
c. Faculty opinion of attainment of ABET Outcomes  
d. Senior Exit Interviews  
e. Alumni Survey  
f. Engineering Advisory Board Meeting

This data collection is subject to the following actions and characteristics:

- All 11 outcomes (a-k) are assessed by at least two courses.  
- There are rubrics for the performance indicators, two or more for each outcome (a-k). If two courses test the same outcome, the same rubric is used.  
- A schedule for testing all outcomes is given in Tables 4.A.1 & 4.A.2  
- Rubrics for assessment have been updated based on advice from Dr. Susan Schall and knowledge gained at the ABET Symposium of this April 2017. The new rubrics are based on performance indicators developed from the a. through k. student outcomes. These rubrics were changed from the previous set of rubrics, which were course based, one for each core course as we have learned more about the assessment process. The new rubrics are outcome (a-k) based and focus on program assessment.  
- Outcomes are matched to courses with a schedule for the evaluation of each course is given in Table 4.A.2.

**Nahátá (Planning)**

The second component is Nahátá (Planning) where we evaluate results from assessment and plan what changes will bring better outcomes. As a result of program assessment, suggestions or recommendations for improvement are completed. Other input may include outside evaluators, the Assessment Committee and the Dean of Instruction.

We implemented having Engineering Assessment Meetings to evaluate and assess more specifically for our engineering programs. Our first meeting of this type was in May 2017 and led to robust discussion of how we assess the Capstone course. In the Spring of 2017 a combined IE-424/EE-423 Capstone class had been held and we discussed changes to the course and the elements that lead up to it. Some of the changes we are implementing from that are:

1) More use of CAD software in design projects in lower level courses.  
2) Use of better rubrics with performance indicators for evaluating student outcomes from all courses.  
3) Making the Electrical Engineering curriculum have two Capstone Classes, in the first
the EE students will work with an IE student taking Project Management for the PM portions of the course and in the second IE students will join the course to complete the Capstone project.

4) More emphasis on design standards and constraints in all classes.

Íína (Implementing)

The third step is Íína (Implementing) after the engineering faculty assessment meeting, professors are expected to take the changes discussed and to apply them.

There have been slight changes of curriculum since the program was originally going to be launched as a Mechanical Engineering program and subsequently we have been able to incorporate more Industrial Engineering specific courses (Changes 1, 2, 3 & 8) with a few curriculum changes. A curriculum revision was done in Spring of 2016 to bring the program into better alignment with ABET guidelines. Suggestions and changes that have happened in the 2014-2017 for the current ABET review period include:

1) Additional of course in Lean Production (IE-235): Lean Production derived from the Toyota Production System is an important methodology in today’s business and industrial environment. Many employers expect students to have at least basic knowledge of Lean Manufacturing on graduation and since this is Mr. Whiting’s area of study he took responsibility for adding this course. In the course theoretical and hands on knowledge of the subject is covered. Methods of creating a holistic system for production are emphasized.

2) Replacement of Advanced Manufacturing Analysis by Lean Production and Computer Aided Manufacturing: Advanced Manufacturing Analysis had never been taught and was ill defined as to its purpose. The concepts it would cover are incorporated into Lean Production and Quality Control. Computer Aided Manufacturing is useful in giving students many of the basic concepts of automated or semi-automated systems and teaching the calculations necessary to design and use these systems as part of an integrated system. System Simulation has since replaced Computer Aided Manufacturing as a requirement but as Computer Aided Manufacturing is incorporated into the Advanced Manufacturing Technology program, it may be taken by IE students as an elective. This decision was made by Faculty after discussion with the Dean, Dr. Agbaraji.

3) Replacement of Computer Aided Manufacturing by System Simulation. For a short time Computer Aided Manufacturing was listed as a requirement in the IE Program while we were working on getting a multi-seat academic license for ARENA to teach simulation class. More businesses and industries are using simulation to test and refine ideas for new systems and want graduates who have those skills. This is one of the modern engineering tools that is considered necessary for graduates and was desired by Faculty teaching both in the IE and AMT programs.

4) Splitting Engineering Statistics into two courses. Basic Statistics and Probability and Inferential Statistics will be offered to give students more time and practice in learning essential statistical skills. Mr. Whiting asked for this change because of the many concepts that were poorly covered in Engineering Statistics as one course.

5) Elimination of College Algebra and Trigonometry from the curriculum: ABET requirements assume that students have taken these courses or their equivalent. If students join the program without having these courses, they will have to take them to be
able to advance to Calculus.

6) Elimination of Humanities Elective: Recently the Governor of New Mexico asked that schools reduce all Bachelor’s degree programs to 120 credit hours if possible. Presently the IE program requirements for graduation are 123 credit hours, 19 credit hours of which classes are in general education and humanities without counting mathematics and science courses. Eliminating the specific Humanities elective was part of the reduction to 123 credit hours.

7) Splitting Fluid Mechanics and Thermodynamics class into Fluid Mechanics class and Thermodynamics class. Faculty considered that this was too much material to comfortably cover in one course except cursorily.

8) Consolidation of Structure and Properties of Materials Class and Strength of Materials class into Characteristics of Materials Class: These classes were left over from the original creation of the IE program which was originally envisioned as a Mechanical Engineering program. To have more flexibility for more ‘pure’ IE classes these classes were consolidated into one class, which is included in the Pre-Engineering Certificate program and the proposed Engineering Technology two year program, both for dual credit high school students and it continues to be a required course for our IE students.

The changes listed above will be evaluated through the assessment cycle to determine their suitability for developing students and delivering necessary content. Assessment should allow us to assess the effectiveness of these changes.

**Siihasin (Reflection)**

The fourth component is Siihasin (Reflection) during this part of the cycle professors are expected to be teaching in the new methods and seeing how student learning and outcomes are being shaped.

**C. Additional Information**

Copies of any of the assessment instruments or materials referenced in 4.A. and 4.B will be available for review at the time of the visit. Other information such as minutes from meetings where the assessment results were evaluated and where recommendations for action were made will also be included.
CRITERION 5. CURRICULUM

A. Program Curriculum

The IE Curriculum has courses divided into the following categories:

Math/Science
Math and Science courses for a total of 32 credit hours, which includes General Chemistry with Lab, Physics with Lab and Math and Statistics classes. Math/Science curriculum is absolutely necessary to engineering education in any discipline. Our curriculum in this area includes Calculus, Differential Equations, Linear Algebra, General Chemistry, Physics and three courses in Statistics since that is the area of math that is often the most needed in Industrial Engineering.

Engineering Design
Engineering Design courses for a total of 51 credit hours, which include design of Quality Control systems, Facility Layout and Design, and other courses which are intended to emphasize the importance of systems integration and design in Industrial Engineering. Design knowledge is an integral part of achieving success as defined by the PEOs. Table 5.A.1 summarizes classes where design experience projects are taught.

</table>
General Education/Humanities
General Education/Humanities courses for a total of 19 credit hours, which include a requirement for English, History, Humanities and Navajo Language classes. In 1920’s America the Progressive education movement was at its peak. One of the ideas introduced was the ‘well rounded person’. These courses are intended to make students aware of subjects not necessarily within a strict engineering context, but to give a wider view of the world and the students place in it.

Skills Courses
Skills courses for a total of 21 credit hours include skill classes like Engineering Graphics, Computer Skills for Engineers and other topics of interest to the advancement of an engineer’s training and career. The curriculum is expected to support the ability to go on to bigger and better attainments in their careers and personal certifications. While these courses couldn’t necessarily be classified as having design content, they support the abilities needed for other engineering coursework, including design courses.

Curriculum and Program Educational Objectives
As a professional person it is expected that graduation is not the end of education or achievement. Our Program Educational Objectives are focused on achievement on the part of the Industrial Engineering graduate after they obtain a BSIE degree. It is considered that the current curriculum gives the graduate skills and knowledge that will support this.

NTU Program Educational Objectives for Industrial Engineering
Our engineering alumni will show that they meet expectations by performing within one or more of these parameters in five to seven years after graduation:

1) Show progress in their career through greater supervisory tasks, advancing to larger managerial responsibility or increasing technical accountability.

2) Acquire professional engineer’s license, other certifications of expertise in technical areas or attend graduate school in an appropriate technical discipline.

3) Demonstrate success by continuing employment and/or technical accomplishments as entrepreneurs, civil servants or in commercial or industrial endeavors.

PEO #1 is aligned with our curriculum because the sum of the courses should give students an ability to integrate manpower, machines materials, methods and measurement which allows them to understand the systems and to thus manage them. This understanding leads naturally to greater supervisory tasks, managerial responsibility and increasing accountability.

PEO #2 is aligned with our curriculum because the course work is designed to give the student an advanced education in many aspects of systems integration and industrial engineering design. No program can cover every subject applicable to Industrial Engineering in a 120 to 130 credit hour program, but we have covered an engineering education that allows students to go on to obtain certifications, a professional engineers license or to go to graduate school to continue their
education or sharpen their skills. For example, Lean Manufacturing and Six Sigma are both considered important improvement methods in our modern business and industry. In our curriculum, IE-235 Lean Production teaches the students as much as we can of the theory and practice of Lean, but it stops short of certifying the student as an expert. That would take more hands on activity, experience in gathering background information and follow up that there is not enough time for in a 3 credit hour course. Six Sigma is a mathematical improvement tool that we study in IE-413 Quality Control and discuss versus some other quality/improvement methods in other courses. Students passing IE-413 already have the mathematical background to take a Six Sigma certification course successfully.

PEO #3 is aligned with our curriculum because we strive to provide the best education for students, allowing them to go into any field and succeed. The skill set the students acquire during their education here contains elements of commercial and business thinking (e.g., Lean Production, Project Management and Engineering Economy), technical design and accomplishment (e.g., Facilities Design, Quality Control and Design & Manufacturing Processes I & II). Of course there is crossover in many of these courses where principles from more than one area of endeavor is taught.
Curriculum and Student Outcomes

The a–k Student Outcomes are a roadmap to becoming a successful engineer. In this section specific examples of how the curriculum supports attainment of the student outcomes is discussed.

Student Outcome a. An ability to apply knowledge of mathematics, science, and engineering:

This outcome underlies all curriculum taught within the Industrial Engineering curriculum from the earliest classes like Introduction to Engineering to Capstone. Knowledge of math, science and engineering and how they are applied is a foundational element.

Student Outcome b. An ability to design and conduct experiments, as well as to analyze and interpret data:

A lot of emphasis on this principle is incorporated in our statistically oriented coursework, ENGR-169 Basic Statistics and Probability, ENGR-236 Inferential Statistics and IE-363 Design of Experiments. Other courses reinforce this learning throughout the curriculum.

Student Outcome c. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability:

In our Industrial Engineering program students are taught to examine the design of all elements as part of a system. Design of a single workstation, design of a process, design of a component must all be viewed as part of a whole, which must function together for the greater good. Systems design emphasized in classes such as, Lean Production, Project Management and Facility Design.

Student Outcome d. An ability to function on multi-disciplinary teams:

In modern engineering practice, more than ever before engineers function as part of a diverse team of specialists all working toward the same goal. Classes such as Introduction to Engineering and Capstone are natural educational opportunities for students to interact with others of different skills and abilities where all can make valid contributions to the final project.

Student Outcome e. An ability to identify, formulate, and solve engineering problems:

This is part of the student curriculum from the first semester they start. Whether it is Introduction to Engineering class where students identify and solve very simple engineering problems to something as complicated as System Simulation where students must unravel many layers of complicated interrelationships to be able to create and validate models of complex systems the Industrial engineering program works very hard to make sure students have this knowledge.

Student Outcome f. An understanding of professional and ethical responsibility:
Ethic Codes of Conduct and correct ethical behavior have been taught explicitly during Introduction to Engineering and Project Management classes. Ethical problems and conundrums are discussed as they arise in other courses.

Student Outcome g. An ability to communicate effectively:

Students must be able to communicate well in school and even more so when they enter the world of professional practice. Our students must communicate well since most of the Industrial Engineering curriculum requires end of semester class projects requiring a presentation and report. Additionally the Computer Skills for Engineers course added specifically to the curriculum to improve student skills in communication is required for all students starting in 2016 or later.

Student Outcome h. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context:

General Education courses intended to give students a wider view of the world are an integral part of the curriculum. Additionally professors are expected to bring up issues that illustrate the impact of engineering solutions past and present on not only the engineering aspects, but also the wider impacts of those solutions.

Student Outcome i. A recognition of the need for, and an ability to engage in life-long learning:

Professors lead by example in this area relating their journey and learning experiences to illustrate the importance of life-long learning. This is emphasized in Introduction to Engineering and Capstone and Professors stories about their work and struggles to gain higher degrees, get certifications or licenses drive home a subtle point to the students. Additionally participation in Student Conferences and other activities help to accustom students to the concept of continuing learning activity. Life-long learning is assessed in exams and exit surveys.

Student Outcome j. A knowledge of contemporary issues:

Engineers do not work in a vacuum cut off from the wider world. The best engineer is one who knows what is happening in the world and the place of themselves and their work within it. Throughout the curriculum Professors relate the engineering education they are delivering to issues that are contemporary today and to situations that have occurred in the past.

Student Outcome k. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice:

Being able to understand and use the latest techniques, tools and methods is crucial to being able to function as an engineer. In Industrial Engineering, we incorporate tools such as Minitab, Arena and CAD as well as spending time making sure students can use the Microsoft Office suite. Techniques taught in classes emphasize the selection of the best techniques for the purpose given. Many classes within the program (21 credit hours) are there to increase the students’ skills and knowledge to make them better more broadly educated engineers.
**Curriculum and Prerequisites**

Courses are intended to be taken in an order that ensures that the student is learning progressively more complex material that is building on the basic material learned in earlier courses. While putting off some courses is not a problem, in other cases the student may be unable to understand a course at all if the prerequisite has not been taken. Even if they successfully pass the class they may not have a depth of understanding needed.

One of the areas of potential improvement for the Industrial Engineering program is to create more prerequisites through the program to help channel students better. This is a possible method to move toward a cohort system, which will benefit the students by allowing them consistently to take classes with students they know and students can work together for greater understanding of course material.

**Major Design Experience** While we have design incorporated into many courses in the Industrial Engineering program, Capstone is expected to be a very important course in that the students take an idea and do research and engineering work to manifest an idea or product. The last Capstone class was a combined IE-424/EE-423 course with four Industrial Engineering students and two Electrical Engineering students. We have worked to combine these classes so that students learn to work on a multidisciplinary team. We are planning to combine with the Advanced Manufacturing Technology programs Capstone in the future if possible. (That is waiting for a curriculum revision of the AMT program.)

Capstone is expected to give the students a taste of the experience of a working engineer. Capstone projects must incorporate knowledge and skills acquired in many classes. Almost all engineering classes require a project based on the knowledge and skills of that course, but the Capstone is expected to go beyond that to synthesis of knowledge cutting across their broader education. Constraints for this project are initially set by the students, but checked and corrected by the Professors supervising the class. Design standards are incorporated in the project and in the most recent class we had Dr. Vohnout lecturing on design standards for creating elements within the project to be made with 3D printers and Dr. Romine lecturing on Electrical Engineering standards and control for the project (Amphibious Submarine Drone).

After the Spring 2017 Capstone classes changes were made by Electrical Engineering to have two semesters of Capstone. It was also decided at the May 15-16 Engineering Assessment Meeting that future Capstone classes will be given a checklist of requirements to make sure that the class better incorporates use of design standards and all necessary elements of Project Management. Industrial Engineering Students will work with the first half of EE Capstone to ensure that adequate time and effort is spent on putting in place a plan that will be workable for the Capstone process. IE students will join the combined Capstone class to help complete the project in the Spring semester.

**Materials for ABET PEVs** Materials that will be available to the PEVs in the Material Room will be:

1) Binders separated by individual courses containing Syllabi, representative samples of student work in the form of homework, quizzes, midterms, finals and project work.

2) Individual Student Portfolios for individual classes

3) Transcripts for all graduates of the Industrial Engineering program

4) PowerPoint presentations and Reports from student internships

5) Textbooks used in the courses, both those formerly used and the present editions

6) Folders with Assessment Reports

4) Minutes of Engineering Assessment Meetings
5) Minutes of Engineering Advisory Board meetings

6) Bylaws of the Engineering Advisory Board

7) Checklists for all versions of curriculum for the IE program as it has evolved from 2012 to now

8) Copies of Senior Exit Interview Survey with results and Engineering Alumni Survey

**B. Faculty Workload**

Faculty are expected to teach 14 to 16 credit hours per semester unless release is given for research purposes. The most recent workload for faculty who teach major courses in Industrial Engineering is given in Table 6.B.1 (ABET 6-2) on the next page.

1. FT = Full Time Faculty or PT = Part Time Faculty, at the institution
2. For the academic year for which the Self-Study Report is being prepared.
3. Program activity distribution should be in percent of effort in the program and should total 100%.
4. Indicate sabbatical leave, etc., under "Other."
5. Out of the total time employed at the institution.
C. Faculty Size

Presently there is one full time faculty member for the Industrial Engineering program, Harry S. Whiting II, PE which together with the leveraging of faculty from other programs has been sufficient to offer all IE courses this year (2016-2017). Mr. Whiting has been the IE advisor since he first started with NTU in the Fall of 2012. Harry’s advice as to classes, career advice and personal counseling have been used by students of the IE program. He was asked at that time to take over as Faculty Advisor to the Engineering Club as well. The Engineering Club has participated in a number of activities: touring Sandia Labs and the BioPappel Papermill, running an annual Holiday Food Drive for the benefit of Navajo Nation WIC Program and a number of campus cleanups. We are working with the Raytheon Diné facility and the Arizona Public Service Four Corners Power Plant for purposes of employment in internship and after graduation.

New IE Professor In the summer of 2017 we are hiring another Professor for Industrial Engineering to replace Dr. Ehteshami who was teaching Industrial Engineering classes in areas where he had expertise. This will allow students to progress smoothly through the program without the necessity of having to schedule around classes that are only offered occasionally. Part of the Five Year plan for Engineering & Technology as presently envisioned is to expand full time faculty members for IE as we transition from a teaching college to a research university paradigm.

Several other faculty members teach classes that are required or elective classes within the IE program.

Dr. Gholam Ehteshami, who started teaching purely for Industrial Engineering courses, now teaches Chemical Engineering and some required IE topics such as Fluid Mechanics and Thermodynamics which are within his purview as a Chemical Engineer.

Dr. Frank Stomp offers Introduction to Programming and Engineering Optimization, his education is as a computer scientist and mathematician.

Dr. Vincent Vohnout, an industrial engineer with many years’ experience in industry and education, teaches classes which are applicable to both the Advanced Manufacturing Technology program and IE.

Ms. Elisha Wortham teaches Laser Scanning class in the Building Information Modeling program. That class is an elective for IEs.

Mr. Harold Halliday teaches the Engineering Graphics courses in addition to his work as Project Coordinator for certain courses and Director of the Center for Digital Technology.
D. Professional Development

Harry S. Whiting II, PE has participated in several workshops within the past year. He helped organize and participated in the Remedial Math Workshop held in August of 2015 and led by Professors from the University of Hawaii, Kauai, a workshop on Data Management in Shiprock and one on Federal Grant funding held at the NTU Business Incubator, both in July 2016 and was the trainer for a workshop held there in July 2016 on Lean Production. Harry’s ability to attend conferences and workshops was curtailed by treatment for cancer, but he has been declared cancer-free now so that his participation in more of these activities in the future is to be expected. Most recently in the spring he attended the ‘Wolves Den’ Inventors and Entrepreneurs Workshop with students at New Mexico Technical University, the ABET Symposium in Baltimore and the Basics of Assessment Workshop held immediately after. In the summer of 2017 he is working on a grant on lattice structure properties with Lawrence Livermore Laboratory and working on the two year Engineering Technology Program which is expected to be approved by the Curriculum Committee in the Fall of 2017. Harry Whiting is the Chairman of The Remediation of the Environment Committee (TREC), which is working on creating the Navajo Center for the Environment. This committee was organized by six members of the Faculty and Staff and has received support (ex post Facto) from the President of NTU.

Currently NTU is in the process of hiring the second Industrial Engineering faculty member. This process is expected to be completed in time for the new Professor to be ready for the Fall semester which starts in August.

E. Authority and Responsibility of Faculty

Faculty are expected to have a lot of input regarding course creation and modification; we are looking at offering Special Topics courses so that Professors can teach topics outside the regular curriculum to enhance the opportunities for students and allow Faculty to teach courses in their specialty areas that may not be part of the regular curriculum. These would be offered on a one per semester or one per year basis. NTU is learning more about assessment and all professors are expected to participate in class and program evaluation and to use that data to modify courses to better serve the students and their learning. Since faculty often teach the same classes every year they are expected to recognize problems in understanding by the students and together with assessment data to be able to make necessary adjustments and make modifications that will assist students in better learning the subject matter.

The Dean of Instruction, Casmir Agbaraji, PhD, was the first instructor (all teachers at what was Navajo Technical College at that time were ranked ‘Instructor’) was Industrial Engineering. He is robustly involved in curriculum and other issues of all engineering programs here at NTU. Student complaints are usually handled by the Dean.

The Provost position is currently open and applicants are being sought. (This position is being renamed Vice President.) The Graduate Dean, Wesley Thomas, is covering this position in addition to other duties. Traditionally the Provost has been the arbiter for disputes between Faculty and Staff members as well as some disputes between Faculty and Students.
The Dean of Student Services position is vacant at the moment with the last Dean having left at the end of the Spring 2017 semester. In the past this Dean has not been involved in the engineering programs.

The President of the University has not been involved in decisions affecting the engineering programs aside from their initial authorization.
CRITERION 7. FACILITIES

A. Offices, Classrooms and Laboratories

Offices

NTU offices or office spaces minimally equipped with a computer, monitor, and desktop printers. Other IT related equipment may be installed at the request of the instructor and approval from both their department head and IT directors.

Science and Technology Building Room 323 (colloquially Tech 323) is the office for the full time Industrial Engineering professor, along with Dr. Bei Xie of the Electrical Engineering program and Dr. Gholam Ehteshami, Chemical Engineering. The office is equipped with computers for each occupant with Microsoft Office and other programs as needed for individual research interest or classes and a scanner/printer. Office hours are posted for all Professors in the form of a schedule showing classes with locations and office hours. Professors are available by email; students will receive a reply in most cases within 24 hours. Immediate / emergency reasons would require a phone call. Professors make their office telephone number available and in case of emergency they sometimes list personal cell phone numbers on the syllabus.

Other Faculty offices for those teaching in the Industrial Engineering program on a part-time basis are located in cubicles in Tech 325 and Tech 322 classrooms as well as the Fablab (Fabrication Lab). All faculty have a computer with at least the Microsoft Office suite installed.

Tutorial Services and STEAM Lab:

An Industrial Engineering Intern is available for tutoring: working 20 hours spread over 5 days a week located in Tech 325. The intern serves as an embedded tutor for one Math course each week. Their hours are posted each semester and students are encouraged to use their services and those of the STEAM (Science, Technology, Engineering, Arts, and Mathematics) Lab. The STEAM Lab employs an Industrial Engineering student for tutoring in our subjects.

Tutoring is available to all students in the STEAM Lab. The lab offers tutoring services and general use of computers. The STEAM Lab always has a specific tutor for Industrial Engineering courses. In lieu of structured tutoring, the facilities may be used simply as a quiet place to work on homework assignments. Hours of operation vary from semester to semester, but include some afternoons and evenings, with extended hours during midterms and finals. Specific hours are posted on the entrance door, on posting boards throughout the campus and in Tech 322 and 325. Tutorial Services is also a source of employment for students who are qualified for the work-study program. The STEAM/Tutoring lab is located in the Student Union Building.

---

1Include information concerning facilities at all sites where program courses are delivered.
Classrooms
NTU classrooms are minimally equipped with student accessible computers, monitors, and classroom printers. Presentation systems, such as projectors or touch capable TVs, are installed or can be installed at the request of the instructor. Other IT related equipment may be installed at the request of the instructor and approval from both their department head and IT directors.

Most Industrial Engineering courses are taught and located in the Science and Technology Building Rooms 322 and 325, but due to scheduling issues classes have been moved to other classrooms that were idle and/or relocated to the Center for Digital Technology, AKA Fabrication Lab (“FabLab”), to better accommodate the students that need to use the equipment located there. Due to software programs that are located only on computers in Tech 322, Tech 325 and the FabLab, scheduling is extremely crucial to have the necessary resources available for students. Mr. Whiting usually makes up the schedule for Industrial Engineering, Electrical Engineering, Chemical Engineering, Chemistry and Physics classes since all the rooms and labs for those are in constant use.

Laboratories
NTU laboratories are minimally equipped with staff and student accessible computers, monitors, and lab printers. IT related equipment are directly related to the machines being operated during lab session. Other IT related equipment may be installed at the request of the instructor and approval from both their department head and IT directors.

Students have access to computers in Tech 322 and Tech 325 when classes are not in progress or if the instructor allows them to work while a class is in session. These computers have 3D modeling software (AutoCAD, Inventor, Solidworks, and Creo Simulate) and we have added ARENA and Minitab, using them in the spring semester of 2017 for System Simulation and Design of Experiments classes. The “FabLab” houses laser scanners, 3D printing machines, tensile strength machine, and other equipment that can be utilized by students. Some classes such as Rapid Prototyping, Laser Scanning and Digital Inspection are held completely or partially in the Fablab since that is where the equipment is housed.

B. Computing Resources

All computing resources NTU purchases and installs must first get approval from the IT department. The approval structure ensures equipment compatibility, usability, and maintainability. Workstation, desktops, and laptops are purchased through the big box vendor CDWG and the manufacture NTU has standardized on are Lenovo business built systems. There are special circumstances where purpose-built workstations and desktops can be presented to IT for approval. The bill of materials approval and the physical build process is the sole responsibility of the IT department.

The IT department accommodates most modern-day computer operating systems for campus workstations, desktops, and laptops. Microsoft Windows 7 Professional is the current installation NTU IT is supporting. The IT department is scheduled to start Windows 10
Professional upgrades in Fall 2017. Other typical applications the IT department installs during an installation are Microsoft Office Professional, Adobe Acrobat Reader, VLC player, Malwarebytes, SuperAntiSpyware, Ccleaner, Revo-Uninstaller, Chrome, Firefox, and Sophos Endpoint Protection. These applications are part of the basic package installed on all computer technologies.

General student areas such as the Library, STEM Lab, Elearning lab, classroom, and labs, may receive additional applications for the particular discipline being pursued. In these situations, the IT department works hand in hand with the lead instructors or department heads to accommodate local and network licensing. Other modern days operating systems supported are Ubuntu Linux, Centos, Fedora, and Mac OS.

Servers are built from the chassis up to accommodate the application of the system. NTU does operate several Lenovo, IBMs, and Dell systems. However, the new server systems being installed are Supermicro Chassis with specified processors, system ram, and storage devises. Dependent upon the application of the server, NTU’s IT office accommodates Windows Server 2008 R2 and above, Ubuntu Server, Centos server, and recently VMware VSphere for virtual server systems. Servers are configured with the requirements of the academic department and the help of the lead individuals requesting the system.

NTU’s current Local Area Network (LAN) backbone has the capability of 10 Gigabit per second (Gbps). New and major classrooms have the capacity to be upgraded to 20 Gbps in the future. This allows the ability to provide local high performance computing and storage access. All computing technologies are connected at line card speeds to enterprise Brocade/Ruckus campus switches.

NTU’s Wide Area Network (WAN) includes 1 Gbps ethernet service through Frontier communication’s fiber optics, 100 Megabit per second (Mbps) over NTUA licensed microwave/fiber optics, 177 Mbps and 155 Mbps over NTU build licensed microwave systems dropped at ABQ-G operated by the University of New Mexico. There are future plans to add layer 2 wave services to Denver and Phoenix. These services will have the capacity of 1 to 10 Gbps.

NTU’s local Wifi access is being upgrade in phases. First phase completed the install, testing and commission of the central wireless access controller and Wifi radio installs in both the new student union building and library. Phase 2 is to extend the managed coverage to the Science and Technology building, IT building, Fab Lab, and engineering classrooms. Phase 3 is to extend and upgrade the managed coverage to the residential facilitates.

STEAM Lab
Located in the Student Union Building and houses tutorial services that are open to all NTU students. Hours of operation vary from semester to semester, but include mornings, afternoons, and evenings, with extended hours during midterms and finals. Specific hours are posted on the entrance door and on posting boards throughout the campus. There are currently thirteen (13) computers for use. Printing and scanning is available free of charge for students.

- Software:

- Anti-Virus Software:
  - CCleaner, Malwarebytes Anti-Maleware, and SUPERAntiSpyware

**Fabrication Lab (FabLab)**

Hours of Operation: 8:00 AM to 5:00 PM
Table space for studying and putting projects together, 6 computers have double monitors, 2 computers have one monitor

- **Software:**
  - Geomagic, Microsoft Office, JAVA, Maya, AutoCAD, PT Creo, and Autodesk Inventor
- **Anti-Virus Software:**
  - SUPERAntiSpyware, and CCleaner

**E-Learning (MOODLE)**

NTU’s goal is to expand access to higher education opportunities for individual and community members of the Navajo Nation and others through electronically offered classes. Distance learning and online teaching technology will be used to provide relevant and timely coursework, information, and training to enhance the learning experience by removing the barriers of both time and place. Once the distance education program is fully implemented, students can enroll at NTU from off-campus computer labs or at home. The E-Learning office is located in Modular Building 8. Hours of operation are Monday 8:00 AM to 8:00 PM, Tuesday through Thursday from 8:00 AM to 7:00 PM, and Friday 8:00 AM to 5:00 PM. Monday through Friday, the E-learning lab will be closed from 12:00 PM to 1:00 PM and closed on the weekends.

Computers:

- Microsoft Office

**Information Technology (IT) Building**

Houses our classes for Information Technology classes while providing technology services throughout the campus. The building is open from Monday through Friday at 8:00 A.M. to 5:00 P.M., while closed on the weekends.

Hours of Operation:
Monday through Friday at 8:00 A.M. to 5:00 P.M.

**Science and Technology Building**

This building has our Science, Business, and Engineering courses. Engineering courses are typically located in the Engineering room (322) or the Computer Aided Drafting “CAD” room (325). The building is open from Monday through Friday at 8:00 A.M. to 5:00 P.M., while closed on the weekends.

- **Engineering room (325)**
  The engineering room has nineteen (19) computer stations and study stations with printing capabilities. There are 3 other additional tables that can be used for studying, laptop use, tutoring, and projects.
o Software
  - Microsoft Office, Mozilla Firefox, Google Earth, Arduino, QGIS Desktop, MATLAB, Adobe Reader X, Oracle VM VirtualBox, Microsoft Silverlight, Notepad ++, PyScripter, JAVA, QGIS-Pisa, JING, TI-83 Plus Flash Debugger, ARENA, Minitab 17 and some computers have Google Chrome
o Antivirus Software:
  - CCleaner, Malwarebytes Anti-Malware, Kaspersky Anti-Virus 6.0, and SUPERAntiSpyware

- CAD room (322)
The Computer Aided Drafting room has 16 double monitor computers and 1 single monitor computer stations with printing capabilities.
o Software:
o Antivirus Software:
  - AVG PC TuneUp, CCleaner, Kaspersky Anti-Virus 6.0, and SUPERAntiSpyware

C. Guidance

Students are trained on how to use the equipment in the Fabrication Lab (“FabLab”) prior to use. Trained personnel are present at all times to assist students that have questions or in need of help. Gregory Dodge, FabLab Technician, is available to assist students and faculty with equipment or computer software used in conjunction with the equipment.

Harold Halliday and Harry Whiting are working on implementing more formal training procedures.

D. Maintenance and Upgrading of Facilities

NTU does not have an overarching policy on maintaining and upgrading equipment. The professors and staff of engineering however are constantly thinking of how we can expand on the equipment for research and student use. Dr. Vohnout has been particularly active in maintaining and improving laboratory equipment and facilities for classes.

NTU aims to establish, support and maintain the capital and technical infrastructure of its campus, while managing resources responsibly, efficiently and with accountability, operating and maintaining our buildings, grounds and utilities in a clean, safe and responsible manner. In the Five Year Plan for Engineering a component of maintaining and upgrading laboratory facilities is being incorporated.
IT does have a policy of maintaining and upgrading computers and software, but due to unevenness in advances in computers and software doesn’t have a schedule for replacement. The computers in Tech 325 are scheduled to be replaced in the summer of 2017 with new equipment.

E. Library Services

The Library is available to students and recently there has been an added addition of an online shared library with other college and universities around the country. Hours of operation are Monday through Thursday at 8:00 A.M. to 9:00 P.M., Friday at 8:00 A.M. to 5:00 P.M., Saturday at 10:00 A.M. to 7:00 P.M., but closed from 2:00 P.M. to 3:00 P.M., and Sunday 12:00 P.M. to 9:00 P.M. but closed from 4:00 P.M. to 5:00 P.M. There are tables for study and laptop use. Library users have access to 28 research computers in the library with printing capabilities. Students will need a library card to have access to the computers. Guests are given a code that they could use. The computer usage is programmed for fifteen (15) minutes; additional minutes can be added if students/guests are not finished.

- Software
  - Adobe Reader X, Mozilla Firefox, PhotoPad Image Editor, PhotoStage Slideshow Producer, VideoPad Sound Editor, JAVA, Microsoft Office, Basic Circuits Challenge, Power Supply Challenge, Premise 4, DC Circuits Challenge, and NCH Software Suite
- Antivirus Software:
  - CCleaner, Malwarebytes Anti-Malware, SUPERAntiSpyware, and Kapersky Anti-Virus 6.0

The library collections contain over 7,000+ print and non-print volumes, arranged according to the Library of Congress Classification System. The library subscribes to over forty research databases including: Academic Search Premier, ArticlesFirst, CINALH, Credo Reference, ERIC, Literature Resource Center, Newsbank, Computers & Applied Sciences, FirstSearch, Environmental Complete, Wilson Science Full-text, Wilson General Science and WorldCat. The library research databases can be accessed off-campus via NTU Library website with user id and password. Students may borrow books or obtain copies of articles via the library’s InterLibrary Loan (ILL) service when the requested items are not owned by the library (note: the process may take up to two weeks or less to receive materials from other libraries in our network). More information on resources is available for students and faculty at the library or by telephone.

F. Overall Comments on Facilities

Navajo Technical University is expanding facilities through grants and partnerships. In conjunction with the Navajo Nation Economic Development Agency we will be building a dedicated Metrology Laboratory starting in 2017 and will be building a Manufacturing Center to encourage innovation among students, faculty and others from the Navajo Nation. In the Fall of 2017 new laboratories for Biology and Chemistry will be opened that will allow the present facilities (lab/Lecture rooms) to be used more by Physics and Chemical Engineering. While our present facilities must be closely scheduled to hold classes they are adequate to offering all classes necessary for Industrial Engineering. Additionally
the Electrical Engineering program has taken over the old Bookstore so that they now have a dedicated classroom and a dedicated EE lab in it.
CRITERION 8. INSTITUTIONAL SUPPORT

A. Leadership

The leadership of the program has to this point relied on one individual, such as Mr. Whiting or Dr. Agbaraji before him. Part of the five year plan is to eventually expand the size of the IE program faculty which will create continuity and greater ability to pursue research. The addition of another dedicated Industrial Engineering professor in the summer of 2017 will obviously help in this regard.

B. Program Budget and Financial Support

Navajo Technical University is funded based on enrollment through the Bureau of Indian Education. NTU also receives additional tuition and fee funding with every increase in enrollment. Navajo Nation funding does not fluctuate, but is pegged at 3.5 million dollars a year. Other discretionary funding from federal and state grants and private foundation grants are variable. Additionally the University is in the process of hiring a Director for Institutional Advancement for fundraising. Part of the Five Year Engineering Plan is to establish an endowment fund which will be able to continue all engineering programs regardless of future grant or school funding.

Presently a number of interns are supported by an educational grant from NSF, who act as embedded tutors in certain math classes, graders and support research efforts. One is assigned to the IE program. The interns have helped with grading, tutoring and doing independent research in aid of our professors.

The IE program has acted cooperatively with the other engineering and technical programs in use of equipment and facilities for its program. As part of the five year plan the IE program will add a Human Factors laboratory for research. Mr. Halliday has been instrumental in acting as ‘Project Coordinator’ for classes needing a larger amount of technical support and equipment allowing students to utilize the ‘FabLab’ and its resources for projects which require more hands on activities.

Luckily, the study of IE requires a low level of resources and equipment. Mr. Whiting has supplied various needed supplies from his equipment used in private consulting for teaching Lean Production and the staff of the ‘Fablab’ allows students to use equipment and resources for projects and aids them when necessary. More Industrial Engineering specific equipment and tools will be acquired in association with research grant funding to phase out using borrowed personal equipment and tools.
C. Staffing

Harold ‘Scott’ Halliday, our Director of the Center for Digital Technology (Fablab) acts as Project Coordinator for some IE classes, such as Introduction to Engineering and Capstone. Gregory Dodge acts as a Lab Assistant to Scott and helps students with hands on aspects of working in the Fablab.

Training is provided every semester during ‘Orientation Week’, where returning and new faculty are given training on assessment, Diné Philosophy of Education, NTU Policies and Procedures, Budgeting and other topics relating to teaching in general and at NTU in particular. Committee meetings are often held at this time to familiarize those just starting or to pick up the threads for those already at NTU. New Professors are also given on the job training in procedures and methods and advice on how to teach in the NTU environment.

D. Faculty Hiring and Retention

Faculty Hiring

1. When new faculty member is going to be hired a request is sent to the Human Resources (HR) Department with a memo about why new faculty are needed complete with a draft job description.
2. The job description is approved by the Dean of Instruction and the HR Director with advice of the members of that program.
3. An ad is placed in Higher Ed Jobs with the job description and posted on the NTU website.
4. Accumulated applications are reviewed by the HR department.
5. Candidates who meet requirements are interviewed by a committee with one representative of HR, and at least three members of the faculty and/or the administration (usually the Dean of Instruction).
6. After interviews are completed, the committee discusses the candidates and ranks them in order of desirability for hire.
7. A memo is written and sent to the Dean of Instruction recommending the hiring of the best candidate with a listing of the other candidates in rank order in case the initial selection is unavailable.
8. Human Resources does a background investigation of the candidate(s).
9. Human Resources contacts successful candidate(s) with details of employment, contract, etc.

Retention

Every effort is made to retain faculty at NTU. There is faculty housing which helps to reduce the amount of commuting that is done by the faculty as a collective whole. Our cafeteria offers three meals a day for most of the year. Professional development is well funded for faculty members attending professional events and for further education.
E. Support of Faculty Professional Development
Describe the adequacy of support for faculty professional development, how such activities such as sabbaticals, travel, workshops, seminars, etc., are planned and supported.

Navajo Technical University (NTU) is an institutional member of Online Learning consortium (OLC). As an instructional member, all faculty have access to discounted pricing on conferences, free webinars, peer networking, and early access to research available through the consortium, including discounts for online faculty development workshops. Best of all, OLC is a globally recognized Quality Scorecard – an exclusive process for measuring and quantifying elements of quality within online higher education programs which is free only to institutional members.

In addition, NTU has also purchased Quality Matters (QM). QM is a faculty-centered, peer review process that is designed to certify the quality of online courses and online components. QM has received national recognition for its peer-based approach to quality assurance and continuous improvement in online education.

Both OLC and QM are great resources for the Engineering programs for professional development, course reviews, ensuring quality course design and delivery, help with program reviews, and the ability to network with other faculty teaching in the same subject matter. Overall, NTU is working on providing support to the faculty to help establish a state-of-the-art Engineering program.

PROGRAM CRITERIA
Industrial Engineering must prepare graduates to develop, design and improve integrated systems including people, materials, information, equipment and energy. We have evolved from a program emphasizing courses as more discrete and self-contained to one that emphasizes integration of concepts from different courses into a unitary whole.

Examples of this are adding courses like Lean Production and System Simulation which approach systems design holistically, viewing activities in facility or a production line as integrated components within a system. Students are taught how to analyze discrete individual components in a system, but only in the context that they will be an integral part of a system.

By working on making sure that students approach course work using prerequisites we reinforce the building nature of IE and the building of understanding so as to give students a broader view and not just a method of examining individual parts of a system.
APPENDICES

APPENDIX A – COURSE SYLLABI

All Navajo Technical University syllabi have these sections listed:

Mission Statement
Navajo Technical University’s mission is to provide college readiness programs, certificates, associate, baccalaureate, and graduate degrees. Students, faculty, and staff will provide value to the Diné community through research, community engagement, service learning, and activities designed to foster cultural and environmental preservation and sustainable economic development. The University is committed to a high quality, student-oriented, hands-on-learning environment based on the Diné cultural principles: Nitsáhákees (Thinking), Nahátá (Planning), İína (Implementing), and Siihasin (Reflection).

Grading Plan
(Points varies with each instructor)
A = 100 – 90%
B = 89 – 80%
C = 79 – 70%
D = 69 – 60%
F < 60%

Cell phone use
Please turn cell phones off or place them on silence or vibrate mode BEFORE coming to class. Also, answer cell phones OUTSIDE OF CLASS (not in the classroom). Exercising cell phone use courtesy is appreciated by both the instructor and classmates.

Attendance Policy
Students are expected to regularly attend all classes for which they are registered. A percentage of the student’s grade will be based on class attendance and participation. Absence from class, regardless of the reason, does not relieve the student of his/her responsibility to complete all course work by the required deadlines. Furthermore, it is the student’s responsibility to obtain notes, handouts, and any other information covered when absent from class and to arrange to make up any in-class assignments or tests if permitted by the instructor. Incomplete or missing assignments will necessarily affect the student’s grades. Instructors will report excessive and/or unexplained absences to the Counseling Department for investigation and potential intervention. Instructors may drop students from the class after three (3) absences unless prior arrangements are made with the instructor to make up work and the instructor deems any excuse acceptable.

Academic Integrity
Integrity (honesty) is expected of every student in all academic work. The guiding principle of academic integrity is that a student’s submitted work must be the student’s own. Students who engage in academic dishonesty diminish their education and bring discredit to the college.
community. Avoid situations likely to compromise academic integrity such as: cheating, facilitating academic dishonesty, and plagiarism; modifying academic work to obtain additional credit is in the same class unless approved in advance by the instructor, failure to observe rules of academic integrity established by the instructor.

Diné Philosophy of Education
The Diné Philosophy of Education (DPE) is incorporated into every class for students to become aware of and to understand the significance of the four Diné philosophical elements, including its affiliation with the four directions, four sacred mountains, the four set of thought processes and so forth: Nitsáhákees (Thinking), Nahátá (Planning), Īína (Implementing), and Siihasin (Reflection) which are essential and relevant to self-identity, respect and wisdom to achieve career goals successfully.

Students with Disabilities
The Navajo Technical University and the General Science program are committed to serving all enrolled students in a non-discriminatory and accommodating manner. Any student who feels he/she may need an accommodation based on the impact of disability, or needs special accommodations should inform the instructor privately of such so that accommodations arrangements can be made. Students who need an accommodation should also contact the Special Needs Counselor, Malcolm McKerry, whose phone number is 505-786-4138.
ABET Course Syllabi for

1. **Course number and name:** ENGR-123: Computer Skills for Engineering
2. **Credits and contact hours:** 3 Credits and 3:30 PM – 4:50 PM
3. **Instructor’s Name:** Harry S. Whiting II, PE
4. **Textbook:** Students will be able to download free textbooks from Bookboon.com
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      This course reviews the use of fundamental operations and features of the Microsoft Windows operating system. A set of projects are assigned to utilize the most commonly used features of Word, Excel, and PowerPoint (or other presentation software) and to introduce other features which are important to engineering analysis and related report generation. These basic capabilities are utilized to perform calculations, to generate graphs and to solve equations, as well as to organize and document solutions to a variety of engineering analysis problems.
   b. **Pre-requisites or co-requisites**
      There are no required pre-requisites or co-requisites for ENGR-123: Computer Skills for Engineering.
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**

<table>
<thead>
<tr>
<th>COURSE OUTCOMES</th>
<th>COURSE MEASUREMENTS</th>
</tr>

<td></td>
</tr>
<tr>
<td>A strong understanding of using EXCEL, how to use formulas, formatting to highlight results and creation of graphical elements to enhance understanding</td>
<td></td>
</tr>
<tr>
<td>A strong understanding of using POWERPOINT, formatting by using Master Slides, how to create a strong presentation</td>
<td></td>
</tr>
<tr>
<td>An ability to communicate ideas in written documents, through presentations, incorporating tables and graphical methods</td>
<td></td>
</tr>
</tbody>
</table>

ENGR-123: Computer Skills for Engineering is a *required* course in the Industrial Engineering program.

6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**
7. Brief list of topics to be covered.
   a. Parts and Operation of computers
   b. Using WORD
      i. Features
      ii. Formatting
      iii. Use of Automatic Features
   c. Using PowerPoint
      i. Features
      ii. Formatting using Master Slide View
      iii. Limiting and Aligning bullet points
      iv. Automating bullets and figures
   d. Using EXCEL
      i. Features
      ii. Functions in Excel
      iii. Creating Tables & Graphs
ABET Course Syllabi for

1. **Course number and name:** MTH-162: Calculus I

2. **Credits and contact hours:** 4 Credits and (Tuesday/Thursday) 2:30 PM – 4:10 PM

3. **Instructor’s Name:** Roberto Nacorda

5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      This course is designed to develop the analytical ability of students through (1) modeling functions of calculation of its limit, (2) defining and solving derivatives of functions, (3) solving equations of tangent and normal lines, (4) implicit differentiation, (5) chain rule, (6) related rates and optimizations, (7) fundamental theorem of Calculus, (8) volume of solids of revolution. At times, the learning process relating to the Navajo Culture in the areas of Nitsáhákees, Nahátá, Īína, and Siihasin will be covered as well as other cultures (multi-cultural studies).
   b. **Pre-requisites or co-requisites**
      A grade of C or better in MTH-123: Trigonometry or an equivalent course or satisfactory placement score.
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      MTH-163: Calculus I is a *required* course in the Industrial Engineering program.

6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      At the end of the semester the students will:
      - Apply their knowledge about differentiation and integration
      - Define/describe calculus concepts
      - Solve problems involving differentiation and integration
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**
Assessment Pieces:
The students will be assessed in a variety of ways:

- Quizzes
- Midterms/ Finals
- Regular formative assessments (classwork and homework)
- Informal assessments like recitation or teacher observation.

7. Brief list of topics to be covered.
- Review of Algebra & Trigonometry
- Limits
- Differentiation (derivatives)
- Applications of Differentiation
- Integration
- Applications of Integration
ABET Course Syllabi for

1. **Course number and name:** IT-105: Introduction to Programming
2. **Credits and contact hours:** 3 Credits and (Monday/Wednesday) 8:00 AM – 9:50 PM
3. **Instructor’s Name:** Frank Stomp, Ph.D.
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      This course will introduce students to the basics of programming concepts and techniques. Students will be introduced to the logic of design in programming and fundamentals of working with data types, conditional statements, loops, and simple algorithms. The processing programming language will be used to introduce students to the concepts behind the Java programming language through structured code to create and manipulate graphical objects and animations.
   b. **Pre-requisites or co-requisites**
      There are no required pre-requisites or co-requisites for IT-105: Introduction to Programming.
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      IT-105: Introduction to Programming is a *required* course in the Industrial Engineering Program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      After successfully completing this course:
      - Students will have an understanding of writing simple programs.
      - Students will have an understanding of object oriented concepts.
      - Students will have an understanding of construction structured code.
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**

ABET Course Syllabi for

1. **Course number and name:** ENGR 103: Introduction to Engineering
2. **Credits and contact hours:** 3 Credits and (Tuesday/Thursday) 3:30 PM – 4:50 PM
3. **Instructor’s Name:** Harry S. Whiting II
   ISBN-10: 1-305-08476-4
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      This course introduces the students to the engineering profession, ethics, engineering tools, and future trends. The students will work in team projects as well. The student will have a sound understanding of the engineering field and will have begun the mastery of the basic knowledge and skills required for all engineering fields offered at Navajo Technical University.
   b. **Pre-requisites or co-requisites**
      Pre-requisite: MTH 121: College Algebra.
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      ENGR 103: Introduction to Engineering is a required course in the Industrial Engineering program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      - Students will be introduced to the engineering design process.
      - Students will be introduced to ethical considerations in engineering and technology.
      - Students will be able to use Word, Excel, and PowerPoint to solve simple problems, give presentations, and write reports.
      - Students will be able to identify some engineering disciplines and the main problems that they solve.
      - Students will be able to solve simple engineering problems.
      - Students will be able to prepare effectively for classes.
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**
6. Brief list of topics to be covered.
   a. Fundamental Units
      i. Fundamental Units
      ii. Units derived from Fundamental Units
      iii. Mathematical relations and problems
   b. Engineering Design process
      i. Engineering Notebooks
      ii. Drawing and Sketching ideas
ABET Course Syllabi for

1. **Course number and name:** ENGR-130: Engineering Graphics
2. **Credits and contact hours:** 3 Credits and (Tuesday/Thursday) 12:30 PM – 1:50 PM
3. **Instructor’s Name:** Harold Halliday
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      In this course the basic principles of Engineering Graphics, blueprint reading and geometric constructions are reviewed. Multi-view projections and 3D visualization, and basic dimensioning are introduced. This course is intended for but, not restricted to, on-line delivery. The course also introduces students to solid modeling and basic methods of rapid prototyping including 3-D printing.
   b. **Pre-requisites or co-requisites**
      Pre-requisite: DFT-101: Technical Drafting or permission of the instructor.
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      ENGR-130: Engineering Graphics is a required course in the Industrial Engineering program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      - To provide students the skills and knowledge needed to create mechanical engineering drawings.
      - To provide students’ knowledge and skills to create necessary views and notation of mechanical parts including springs and fasteners.
      - Provide students an introduction to 3D modeling skills needed to create mechanical engineering models and drawings.
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**

ABET Course Syllabi for

1. Course number and name: ENGR-143: Characteristics of Engineering Materials
2. Credits and contact hours: 3 Credits
3. Instructor’s Name:
   ISBN-10: 0-135-60764-7
5. Specific Course Information:
   a. Brief description of the content of the course (catalog description)
   b. Pre-requisites or co-requisites
      There are no required pre-requisites or co-requisites for ENGR-143: Characteristics of Engineering Materials.
   c. Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.
      ENGR-143: Characteristics of Engineering Materials is a required course in the Industrial Engineering program.
6. Specific goals for the course:
   a. Specific outcomes of instruction:
      To introduce students to the basic features of materials and selected methods of Classification of Materials.
   b. Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.
7. Brief list of topics to be covered.
   - Nature of Materials
   - Types of Materials
   - Scale of Materials
   - Properties of Materials
   - Application of Materials
   - Processing of Materials
   - Characterization Methods for Classification of Materials
ABET Course Syllabi for

1. **Course number and name:** MTH-163: Calculus II
2. **Credits and contact hours:** 4 Credits and (Tuesday/Thursday) 2:00 PM – 3:40 PM
3. **Instructor’s Name:** Sasha Han
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      This course covers topics such as applications of integration, area between curves, volumes, techniques of integration, integration by parts, trigonometric substitution, partial fractions, further applications of integration, arc length, area of a surface of revolutions, parametric equations and polar coordinates, infinite sequences and series, comparison tests, ratio tests, root tests, and power series. The course involves four hours of lecture per week.
   b. **Pre-requisites or co-requisites**
      Pre-requisites: A grade of C or better in MTH-162: Calculus I or an equivalent course or satisfactory placement scores.
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      MTH-163: Calculus II is a required course in the Industrial Engineering program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      At the end of the semester the students will:
      - Apply computation rules
      - Define/describe advanced math concepts
      - Solve problems involving rules and properties of calculus
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**

Assessment Pieces:
The student will be assessed in a variety of ways:
- Pre-Test/Post Test
- Quizzes/Midterms/Finals
- Regular formative assessments like classwork and homework
- Informal assessments like recitation or teacher observation

7. Brief list of topics to be covered.
- Review of Calculus I – Integration by Substitution
- Derivatives and integrations of logarithmic and exponential functions
- Integration by Parts
- Integration by Partial Fractions
- Trigonometric Integrals
- Integration by Trigonometric Substitution
- Numerical Integration Approximations using Simpson’s Rule (optional)
- Applications of Integration – Arc Length
- Applications of Integration – Surface Area of Revolution
- Infinite Sequence, Absolute Value Theorem, monotonic Sequence Theorem, Monotonicity, Boundedness, Convergence of Sequence
- Series, Convergence of series, Geometric, Harmonic, Alternating Harmonic, pHarmonic, Taylor Series Expansion, McLaurin Series Expansion
ABET Course Syllabi for

1. **Course number and name:** CHM-120: General Chemistry I
2. **Credits and contact hours:** 4 Credits and Lecture (Monday/Wednesday) 2:300 PM – 3:50 PM; Laboratory (Friday) 8:00 AM – 11:00 AM
3. **Instructor’s Name:** Thigarajan Soundappar, Ph.D
4. **Textbook:** *Chemistry: The Practical Science*, Kelter, Mosher, and Scott
   Laboratory Manual to Accompany *Chemistry: The Practical Science*, Kelter, Mosher, and Almy
   ISBN-10: 0-547-00493-1
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      This course introduces students to chemistry measurements, atomic structure, chemical reactions, gases, thermochemistry, and bonding. A lab is also included as part of the course.
   b. **Pre-requisites or co-requisites**
      Prerequisite: MTH-120: Intermediate Algebra. Lab fee: $125.00
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      CHM-120: General Chemistry I is a required course in the Industrial Engineering program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      The general objective of this course is to gain knowledge on both theoretical and descriptive chemistry. As a supplement, there are various activities that students will engage. Lectures and laboratories are an integral part of the course, so lecture discussion and the experiential learning are expected in order to assist students in the development of problem solving skills and basic chemical concepts.
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**
**COURSE OUTCOMES** | **COURSE MEASUREMENTS**
--- | ---
Describe the process of scientific inquiry | Students complete exercises, quizzes, and exams. Students use simulations to help visualize submicroscopic phenomena. Students conduct laboratory experiments and submit weekly reports.
Solve problems scientifically | Students conduct laboratory experiments and submit weekly reports. Laboratory reports include data, graphs, results, and answers to post lab questions. Students complete quizzes and exams.
Communicate scientific information | Students review, write, and present summaries of scientific journal articles. Weekly written lab reports and semester research project are evaluated.
Apply quantitative analysis to scientific problems | Students are observed for appropriate use of laboratory techniques. Students conduct laboratory experiments and submit weekly lab reports. Students use calculators to solve problems in exercises, quizzes, lab reports, and exams.
Apply scientific thinking to real world problems | Students summarize written and film formats of chemistry related case studies. Weekly written lab reports and a semester research project are evaluated.

**Grading System: Midterm** | **Grading System: Finals**

ABET Course Syllabi for

1. **Course number and name:** ENGR-230: Advanced Engineering Graphics
2. **Credits and contact hours:** 3 Credits and (Tuesday/Thursday) 11:00 AM – 12:20 PM
3. **Instructor’s Name:** Harold Halliday
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      This course will use 3D mechanical software to explain proper solid modeling techniques used for Rapid Prototyping, analysis and other applications which require 3D models. The students will learn the 3D tools and techniques used by NASA and contractors such as Lockheed Martin, Aerojet, Boeing, as well as others.
   b. **Pre-requisites or co-requisites**
      Pre-requisite is ENGR-130: Engineering Graphics
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      ENGR-230: Advanced Engineering Graphics is a *required* course in the Industrial Engineering program.
7. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      - To provide students with advanced tools of Parametric Modeling.
      - To provide students with an interactive model based instruction to reinforce the concepts learned in Mechanical Drafting.
      - To provide students the ability to create Engineering Drawings from Parametric Models.
      - To provide students with an introductory knowledge of Parametric Assemblies.
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**

7. Brief list of topics to be covered.
1. **Course number and name:** ENGR-236: Inferential Engineering Statistics
2. **Credits and contact hours:** 3 Credits and (Tuesday/Thursday) 8:00 AM – 9:20 AM
3. **Instructor’s Name:** Harry S. Whiting II
   ISBN-10: 1-118-53971-0
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      The new ENGR-236 Inferential Engineering Statistics will have more time that can be spent on Hypothesis testing for single samples and more statistical distributions can be discussed. Understanding of ANOVA and regression can be incorporated which has not been extensively apart of this course in the past. Part of this change will be in switching to a new book which has more material and goes into more depth with examples and techniques not included in the present text/ this book will be used for both course.
   b. **Pre-requisites or co-requisites**
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      ENGR-236: Inferential Engineering Statistics is a required course in the Industrial Engineering program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      - Students will be able to determine permutations and combinations of a sample space and associated probabilities.
      - Students will be able to assess conditional probabilities for dependent and independent events.
      - Students will be able to use probability functions and cumulative probability functions of discrete and continuous variables to compute distribution parameters (Expected value and variance).
      - Students will be able to use the tables to calculate probability for Normal or chi squared distributions.
      - Students will be able to perform Type I and Type II error and power of test calculations.
      - Students will understand samples and sampling techniques.
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**
7. **Brief list of topics to be covered.**
   - Hypothesis testing for a single sample
   - Hypothesis testing for two samples using the normal distributions (z & t),
   - Chi-squared distribution
   - F distribution
   - Simple linear regression
   - Multiple regression
   - Analysis of Variance (ANOVA)

ABET Course Syllabi for

1. **Course number and name:** PHY-111: Algebra Based Physics I
2. **Credits and contact hours:** 4 Credits and (Tuesday/Thursday/Friday) 11:00 AM – 12:20 AM
3. **Instructor’s Name:** Abraham Meles, Ph.D

   Course Websites:
   - webwork.navajotech.edu – (alternate: 74.112.229.60)
   - www.engrade.com

   Course websites are used for homework distribution and grades. Any questions please talk to your instructor.

5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      This course is the first in a two-semester introduction to algebra-based physics. The broad topics covered in the course include mechanics, vibrations, and wave motion. More specifically, the topics covered involve one- and two-dimensional motion, vectors, work and energy, momentum and collisions, circular motion, rotational equilibrium and dynamics, solids and fluids, vibration and waves, and sound. Mathematical techniques used in the course include algebra, geometry, and trigonometry, but not calculus. Class meetings will be devoted to lecture, discussion, problem-solving, and discovery labs. There will be three hours of discovery lab each week.
   b. **Pre-requisites or co-requisites**
      Prerequisite: MTH-120: Intermediate Algebra or permission of the instructor.
      This course is only offered in the fall semester. Lab Fee: $100.00
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      PHY-111: Algebra Based Physics I is a required course in the Industrial Engineering program.

6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      - A basic understanding of mechanical physics and knowledge of motion (linear, projectile, circular, oscillatory, and rotational) and the fundamental laws that govern said motions.
      - A basic understanding of energy, momentum and impulse, and the fundamental laws that govern said concepts.
      - A basic understanding of thermodynamics and the fundamental laws that govern it.
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**
7. **Brief list of topics to be covered.**
   - Units and Conversion
   - 1-D Kinematics
   - 2-D Kinematics
   - Dynamics
   - Gravitation (Circular Motion)
   - Work and Energy
   - Linear momentum
   - Rotational Motion
   - Static Equilibrium
   - Fluids
   - Vibrations and Waves
   - Sound
   - Temperature and Kinetic Theory
   - Heat
   - The Laws of Thermodynamics
ABET Course Syllabi for

1. **Course number and name:** IE-235: Lean Production
2. **Credit and contact hours:** 3 Credits and (Friday) 8:00 AM – 11:00 AM
3. **Instructor’s Name:** Harry S. Whiting II
4. **Textbook:** *How To Implement Lean Manufacturing*, 2nd ed., Wilson, Lonnie
   ISBN-10: 0-07-183573-3
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      This course will introduce the student to variations of the Toyota Production
      System as it is used in industry and business to improve efficiency and to build a
      problem solving culture in an organization. Topics will include: 5S, Value Stream
      Mapping, SMED, Kanban, Takt Time, Process at A glance and organizational
      culture change. Course will also compare other manufacturing philosophies and
      systems for manufacturing and production.
   b. **Pre-requisites or co-requisites**
      There are no pre-requisites or co-requisites for IE-235: Lean Production.
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1)
      course in the program.**
      IE-235: Lean Production is a required course in the Industrial Engineering
      program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      - Students will be able to discuss different manufacturing philosophies and
        understand when their application would be useful.
      - Students will be able to calculate Takt Time and understand its use in a
        manufacturing or administrative environment.
      - Students will be able to understand how to apply 5S.
      - Students will be able to describe how to use Lean methods to reduce cost,
        increase product quality and to reduce lead time
      - Students will be able the methodologies of SMED, TPM, JIT, Poke Yoke
        and Jidoka
      - Students will understand basic techniques of facilitating Kaizen events and
        how they are used.
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any
      other outcomes are addressed by the course.**

ABET Course Syllabi for

1. **Course number and name:** IE-223: Design & Manufacturing Processes I
2. **Credits and contact hours:** 3 Credits and (Monday/Wednesday) 3:30 PM – 4:45 PM
3. **Instructor’s Name:** Casmir I. Agbaraji, Ph.D.
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      An introductory course in manufacturing processes and systems will be covered. In addition, various manufacturing processes will be studied, including casting, forming, machining, and welding. Also, manufacturing systems such as industrial robotics and fundamentals of production lines will be covered. Students will develop hands-on skills through team projects.
   b. **Prerequisite or co-requisite**
      Pre-requisite: IE-213: Structure and Properties of Materials
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      IE-223: Design & Manufacturing Processes I is a required course in the Industrial Engineering program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      After successfully completing this course:
      - To introduce students to important concepts in material selection, design, and manufacturing processes.
      - To stimulate creative thinking in students.
      - Conduct laboratory experiment to investigate manufacturing processes.
      - Demonstrate the ability to work as a team member in solving a design problem.
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**
7. **Brief list of topics to be covered.**
   I. General introduction to manufacturing
   II. Fundamentals of materials: their behavior and manufacturing properties
   III. Mechanical behavior, testing, and manufacturing properties of materials
   IV. Physical properties of materials
   V. Metal alloys: their structure and strengthening by heat treatment
   VI. Ferrous metals and alloys: production, general properties, and applications
   VII. Nonferrous metals and alloys: production, general properties, and applications.
   VIII. Polymers, ceramics and composites
   IX. Metal-casting processes
   X. Forming and shaping processes and equipment
   XI. Rolling of metals
   XII. Extrusion and drawing of metals
   XIII. Forging of metals
   XIV. Sheet-metal forming processes
XV. Processing of powder metals, ceramics, glass, and superconductors
XVI. Material-removal processes and machining
Welding and joining

ABET Course Syllabi for

1. **Course number and name:** ME-345: Statics
2. **Credits and contact hours:** 3 Credits and (Monday/Wednesday) 9:30 AM – 10:50 AM
3. **Instructor’s Name:** Gholam Reza Ehteshami, Ph.D.
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      This course will introduce students to the science of statics. During the course students will learn how to determine the relationships between forces acting on rigid bodies at rest. Areas covered will be scalar and vector quantities, resultants, analysis of structures, friction, centroids and center of gravity.
   b. **Pre-requisites or co-requisites**
      There are no pre-requisites or co-requisites for ME-345: Statics.
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      ME-345: Statics is a *required* course in the Industrial Engineering program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      After successfully completing this course, students should be able to:
      - Analyze forces and find out the resultant forces in two and three dimension.
      - Differentiate between various types of supports and draw free-body-diagrams.
      - Compute the reaction force, internal forces, and bending moment at a specific point on a simple structure (beam, frame, and truss).
      - Draw bending moment and shear force diagram to simple structure.
      - Obtain center of mass and centroid for deferent engineering shapes & moment of inertia for deferent sections.
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**

Assessment Pieces:
The student will be assessed in a variety of ways:
- Pre-Test / Post-Test
- Quizzes/Midterms/Finals
• Presentation/Project
• Regular formative assessments like classwork and homework
• Informal assessments like recitation or teacher observation

7. Brief list of topics to be covered.
   • Systems of linear equations
   • Matrices
   • Vector Spaces
   • Linear Transformations
ABET Course Syllabi for

1. **Course number and name:** ENGR-313: Engineering Economics
2. **Credits and contact hours:** 3 Credits and (Tuesday/Thursday) 8:00 AM – 9:30 AM
3. **Instructor’s Name:** Harry S. Whiting II
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      Topics covered include: cost and worth comparison, capital costs, time value of money, replacement economics, taxes, economic efficiency of alternate designs, minimum costs and maximum benefits, risk and uncertainty. Students will learn how to apply economics to engineering projects in order to ensure projects are feasible and efficiently designed and completed.
   b. **Pre-requisites or co-requisites**
      There are no pre-requisites or co-requisites for ENGR-313: Engineering Economics.
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      ENGR-313: Engineering Economics is a *required* course in the Industrial Engineering program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      - Understand simple and compound interest.
      - Move single and annualized cash flows along a time line using a compound interest rate.
      - Move arithmetic and geometric gradient cash flows along a time line using a compound interest rate.
      - Convert between nominal and effective interest rates.
      - Determine an effective interest rate for cash flows with payment periods different from compounding periods.
      - Determine unknown years and interest rates for net present worth (NPW) determination.
      - Convert arbitrary cash flows into NPW, net future worth, or annual worth values.
      - Compare alternatives with same life-cycle, different life-cycles and infinite life using NPW.
      - Compute an Internal Rate of Return (IRR) for a set of cash flows.
      - Identify complex cash flows with multiple IRR values and select the proper IRR.
      - Compare alternatives using Rate-Of-Return (ROR) total and incremental analysis.
      - Perform sensitivity analysis and break/even analysis of economic project.
      - Classify benefits, disbenefits, and cost for Benefit/Cost analysis.
      - Utilize straight line and MACRS depreciation techniques.
• Utilize spreadsheet software for economic analysis.

b. Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.

ABET Course Syllabi for

1. **Course number and name:** MTH-310: Differential Equations
2. **Credits and contact hours:** 4 Credits and (Tuesday/Thursday) 12:00 PM – 1:40 PM
3. **Instructor’s Name:** Sasha Han
4. **Textbook:** *Differential Equations with Boundary – Value Problems*, 8th ed. (or higher), Dennis G. Zill and Warren S. Wright.
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      An introduction to differential equations. Students will be able to classify, construct, and solve different types of differential equations. At times, the learning process relating to the Navajo culture in the areas of Nitsahkees, Nahatah, Iina, and Sihasin will be covered as well as other cultures (multi-cultural studies).
   b. **Pre-requisites or co-requisites**
      Pre-requisite: MTH-163: Calculus II
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      MTH-310: Differential Equations is a required course in the Industrial Engineering program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      - To recognize various types of differential equations.
      - To solve differential equations by special techniques.

ABET Course Syllabi for

1. **Course number and name:** IE-323: Human Factors in Product Design
2. **Credit and contact hours:** 3 Credits and (Monday/Wednesday) 12:30 PM – 1:50 PM
3. **Instructor’s Name:** Harry S. Whiting II
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      Students will learn physical and psychological factors which affect human performance in system design. In addition, course material will cover performance as applied to safety, reliability, productivity, stress reduction. The human/equipment interface design will also be discussed.
   b. **Pre-requisites or co-requisites**
      Pre-requisite: ENGR-234: Engineering Statistics
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      IE-323: Human Factors in Product Design is a *required* course in the Industrial Engineering program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      - Students will understand how to identify human-work problems in occupational and living environments.
      - Students will be able to measure and understand human capacities for work.
      - Students will understand how to measure physical and mental demands on human beings for specific tasks.
      - Students will understand the scientific concepts in designing environments, anthropometry, equipment and work methods for enhancing performance and minimizing stresses on the worker.
      - Students will be introduced to manual materials handling and hand tool design.
      - Student will understand information processing and mental input – mainly visual and auditory.
      - Students will understand how to increase usability of industrial and consumer products.
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**
7. **Brief list of topics to be covered.**
   - Physical and psychological factors which affect human performance in system design.
   - Performance as applied to safety.
   - Reliability
   - Productivity
   - Stress reduction
   - Human/machine interfaces

ABET Course Syllabi for

1. **Course number and name:** IE-343: Design & Manufacturing Processes II
2. **Credits and contact hours:** 3 Credits and (Monday/Wednesday) 3:30 PM – 4:45 PM
3. **Instructor’s Name:** Casmir I. Agbaraji, Ph.D.
   ISBN-10: 0-133-12874-1

   **Reference Textbooks:**
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      This course will cover machining, process planning, blueprint reading, geometric dimensioning and tolerancing, and measuring instruments. The students will develop hands-on learning in team projects.
   b. **Pre-requisites or co-requisites**
      Pre-requisite: IE-223: Design and Manufacturing Processes I
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      IE-343: Design & Manufacturing Processes II is a required course in the Industrial Engineering program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      After successfully completing this course:
      - Students will learn discrete and assembly part manufacturing
      - The students will learn the importance of process planning
      - They will learn reading of blueprints
      - Students will learn how to identify, formulate, and solve engineering problems
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**
7. Brief list of topics to be covered.
   I. Introduction to design and manufacturing
   II. Allowances and fits
   III. Surface roughness specification and interpretation
   IV. Single and multi-point cutting tools
   V. Machining processes fundamentals
   VI. Machine tools, tools, and tooling
   VII. Process planning
   VIII. Machining time calculations
   IX. Machining economics
   X. Blueprint reading
   XI. Measuring instruments
   XII. Geometric dimensioning and tolerancing (GDT)
ABET Course Syllabi for

1. **Course number and name:** IE-363: Design of Experiments
2. **Credits and contact hours:** 3 Credits and (Tuesday/Thursday) 12:30 PM – 1:50 PM
3. **Instructor’s Name:** Gholam Reza Ehteshami, Ph.D.
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      Analysis of variance for different types of factorial designs (single factor, nested, and random factors) will be discussed. Also, different factors during design of experiment, i.e., dependent, independent, and control variables will be explored.
   b. **Pre-requisites or co-requisites**
      Pre-requisite: ENGR-234: Engineering Statistics
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      IE-363: Design of Experiments is a *required* course in the Industrial Engineering program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      - Learn how to plan, design and conduct experiments efficiently and effectively
      - Analyze the resulting data to obtain object conclusions
      - Both design and statistical analysis issues are discussed
      - Opportunities to use the principles taught in the course arise in all phases of engineering work, including new product design and development, process development, and manufacturing process improvement.
      - Applications from various fields of engineering (include chemical, mechanical, electrical, materials science, industrial, etc.) will be illustrated throughout the course.
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**

1. **Course number and name:** ME-354: Thermodynamics
2. **Credits and contact hours:** 3 Credits and (Monday/Wednesday) 3:30 PM – 4:50 PM
3. **Instructor’s Name:** Gholam Reza Ehteshami, Ph.D.
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      Topics include: Laws of Thermodynamics, Phase of substances, Processes and cycles, Work and heat, Control Volumes, Entropy and Enthalpy.
   b. **Pre-requisites or co-requisites**
      Pre-requisites: PHY-111: Algebra Based Physics & MTH-163: Calculus II
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      ME-354: Thermodynamics is a *required* course in the Industrial Engineering program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      - Learn about thermodynamic systems and boundaries
      - Study the basic laws of thermodynamics including: conservation of mass, conservation of energy, and second law
      - Understand various forms of energy including heat transfer and work
      - Identify various types of properties (e.g., extensive and intensive properties)
      - Use tables, equations, and charts, in evaluation of thermodynamics properties
      - Apply conservation of mass, first law, and second law thermodynamic analysis of systems (e.g., turbines, pumps, compressors, heat ex-changers, etc.)
      - Use computer software in evaluation of thermodynamic properties and graphical presentation of problem solutions
      - Enhance their problem solving skills
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**
7. **Brief list of topics to be covered.**

- Basic Concept and First Law
- Second Law
- Properties of Pure Substance and Steam Power Cycle
- Ideal and Real Gases and Thermodynamic Relations
- Psychrometry
ABET Course Syllabi for

1. **Course number and name:** IE-413: Quality Control

2. **Credits and contact hours:** 3 Credits and (Monday/Wednesday) 12:30 PM – 1:50 PM

3. **Instructor’s Name:** Harry S. Whiting II

5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      This course covers digital inspection utilizing computer-aided verification.
      Geometric dimensioning and tolerance control and basic size inspection will also
      be covered along with surface inspection and the basics of quality control.
   b. **Pre-requisites or co-requisites**
      Pre-requisites: IE-363: Design of Experiment
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1)**

      program.

6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      - Students will understand management of quality.
      - Students will be able to understand and develop control charts.
      - Students will understand how to collect data for monitoring industrial
        processes.
      - Students will understand the broad context of quality philosophies.
      - Students will understand quality management theory.
      - Students will understand process analysis.
      - Students will understand quality improvement techniques.
      - Students will understand the meaning of statistical control and random
        variability.
      - Students will understand acceptance sampling techniques.
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any**
      **other outcomes are addressed by the course.**
7. Brief list of topics to be covered.

- Introduction to Statistical Control
- Statistical Concepts
- Quality Tools
- Process Capability Analysis
- Measurement System Analysis
- Control Charts for Variables
- Control Charts for Attributes
- Other SPC Techniques
- Acceptance Sampling
- Lean and the Quality Function
- Quality Function Deployment

ABET Course Syllabi for

1. **Course number and name:** IE-433: Metrology & Instrumentation
2. **Credits and contact hours:** 3 Credits and (Tuesday/Thursday) 3:30 PM – 4:50 PM
3. **Instructor’s Name:** Vincent J. Vohnout, P.E., Ph.D.
4. **Textbook:** None (Reading/ reference materials will be supplied)
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      Students will learn different types of measurement techniques, including laser scanning for computer-aided manufacturing and inspection, optical instruments, temperature, pressure, and force measurements. Medium to long range scanners and close range high quality scanners will be used in the course. Students will gain hands-on experience in capturing digital data, registering scan, and processing scans.
      The course covers different aspects of dimensional measurement technology put in a production context. The intention is to give a good competence in industrial metrology, i.e. knowledge about traditional and new instrumentation, how to handle and select appropriate measurement tools, how to estimate and avoid measurement uncertainties and a good understanding of the role of measurement in the production chain.
   b. **Pre-requisites or co-requisites**
      Pre-requisites: IE-223: Design and Manufacturing Processes I
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      IE-433: Metrology & Instrumentation is a required course in the Industrial Engineering program.

6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      - To understand the basic principles of measurements.
      - To learn the various measuring instruments, their principle of operation and applications.
      - To learn about various methods of measuring Mechanical and process parameters.
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**
7. **Brief list of topics to be covered.**

   I. **Need for metrology**- Metrology concepts in designing and measurement of the systems.

   II. **Estimate measurement uncertainties and present traceable measurement.** Linear and Geometric Tolerances, precision measurement of the devices.

   III. **Different measurement methods and instruments, how to measure product dimensions, shape and surface structure.**

   IV. **Three main purposes of measurement; production process, the product function and the product design.**

   V. **Measurement in the production chain, computer aided integration and quality control.**

   VI. **Fundamentals of Optical Metrology, Optical interferometry – theory and overview, light sources, detectors and imaging systems.**

7. **Brief list of topics to be covered.**
ABET Course Syllabi for

1. Course number and name: IE-424/EE-423: Capstone
2. Credits and contact hours: 3 Credits and (Tuesday/Thursday) 2:00 PM – 3:20 PM
3. Instructor’s Name: Peter Romine, Ph.D. and Harry Whiting
4. Textbook: No Text Required
5. Specific Course Information:
   a. Brief description of the content of the course (catalog description)
      The capstone course will provide the students an opportunity to utilize the skills gained from courses taken during their course of study in their program. Students will propose and execute a semester project containing elements from many classes including project management. Students must work in multidisciplinary groups each group containing at least one Industrial Engineering student and/or one Electrical Engineering student. The initial project proposal will contain the research and planning of the project along with a project proposal complete with deliverables. Students will provide weekly project reports, a final project report, a final presentation and deliverables as agreed upon in the project proposal.
   b. Pre-requisites or co-requisites
      Pre-requisites: IE-380: Project Management
   c. Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.
      IE-424: Capstone is a required course in the Industrial Engineering program.
6. Specific goals for the course:
   a. Specific outcomes of instruction:
      Upon successfully completing this course, the student should:
      - Students will show ability to integrate learning from multiple courses into a project.
      - Students will show ability to work with a team and make valuable contributions to a team effort.
      - Students will create a Project Schedule for their project.
      - Students will show ability to work well on team and individual tasks.
      - Students will show communication skills in a final presentation of their project and written report.
   b. Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.

3. **Instructor’s Name:** Harry S. Whiting II
   ISBN-10: 0-135-00105-6
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      Students will be able to learn how to plan a facility, location, layout models, design, analysis, supply chain relationships, and improvement of warehousing operations. Students will also study how to handle materials within the context of planning and implementation of processes.
   b. **Pre-requisites or co-requisites**
      Pre-requisites: ENGR-313: Engineering Economics
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      IE-463: Facility Planning & Material Handling is a required course in the Industrial Engineering program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      - Students will learn facilities design modeling incorporating the 5Ms.
      - They will learn to make decisions on facilities location problems.
      - They will learn concepts of time study.
      - They will learn warehousing and selection of material handling systems.
      - They will learn Activity Relationships and their application in Facility Planning and Design.
      - They will review the basics of Lean Production.
      - They will learn layout of production, warehouse or office spaces.
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**

ABET Course Syllabi for

1. **Course number and name:** IE-473: Inventory Control & Production Planning
2. **Credits and contact hours:** 3 Credits and (Tuesday/Thursday) 2:00 PM – 3:20 PM
3. **Instructor’s Name:** Harry S. Whiting II
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      In this course, manufacturing support systems and production planning are discussed. Different approaches to the planning of material and capacity as well as the differences between push system and pull systems and Theory of Constraint will be explored.
   b. **Pre-requisites or co-requisites**
      Pre-requisites: ENGR-313: Engineering Economics
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      IE-473: Inventory Control & Production Planning is a required course in the Industrial Engineering program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      - Students will be able to understand forecasting systems and methods.
      - Students will understand operation schedules.
      - Students will understand the broad context of inventory control and effect on markets.
      - Students will understand EOQ, Order Point Systems, Safety and Buffer stocks.
      - Students will be introduced to supply chain management theory.
      - Students will understand production schedules and scheduling.
      - Students will understand pull systems & JIT.
      - Students will understand MRP, Push and CONWIP systems.
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**
### COURSE OUTCOMES

| The student will be able to use tools to create analysis of data based on data gathered or provided. |
| Students will be able to create forecasts & complete MRP charts based on data. |
| Students will be able to distinguish between different inventory management systems and their uses. |
| Students will be able to use capacity planning for projects. |
| Students will be able to calculate EOQ, Order Point, Safety and Buffer stock. |

### COURSE MEASUREMENTS

Assessment will be by problems presented in homework, quizzes, & tests.

Assessment will be by problems presented in homework.

Assessment will be by problems presented in homework, quizzes, & tests.

ABET Course Syllabi for

1. **Course number and name:** IE-494: System Stimulation
2. **Credits and contact hours:** 3 Credits and (Tuesday/Thursday) 9:30 AM – 10:50 AM
3. **Instructor’s Name:** Harry S. Whiting II
4. **Textbook:** Simulation with ARENA, Kelton Sadowski & Zupick, 6th ed.
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      This course will introduce the use of ARENA to create simulations to test improvements in a virtual environment. Students will learn the methods to create a simulation of a system, validation of the simulation and how to interpret results.
   b. **Pre-requisites or co-requisites**
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      IE-494: System Stimulation is a required course in the Industrial Engineering program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      - Students will understand the use of entities, queues, attributes and statistical accumulation within a simulation modelling environment.
      - Students will understand modelling of a system, limitations and advantages.
      - Students will understand the use of ARENA computer software to create System Simulations.
      - Students will understand the modelling of both basic and advanced systems.
      - Students will understand the use of steady state analysis with simulation to model systems.
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**

1. **Course number and name:** AMT-311: Laser Scanning Methods
2. **Credits and contact hours:** 3 Credits and (Monday/Wednesday) 9:30 AM – 11:00 AM
3. **Instructor’s Name:** Elisha Wortham and Harold “Scott” Halliday
4. **Textbook:** PDF documents provided by instructor
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      Students will learn the basics of laser scanning for digital manufacturing and inspection. Medium to long range scanners and close range high quality scanners will be used in the course. Students will gain hands-on experience in capturing digital data, registering scans and processing scans.
   b. **Pre-requisites or co-requisites**
      There are no required pre-requisites or co-requisites for AMT-311: Laser Scanning Methods
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      AMT-311: Laser Scanning Methods is a *selected elective* course in the Industrial Engineering program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      The objectives of this course are to:
      - Introduce students to the theory of laser scanning
      - Introduce students to the different types of laser scanning systems
      - Introduce students on how to process scan data to produce a finished product
      - Instruct students on how to manage scan data and file formats
      - How to specify a laser scanning job
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**

ABET Course Syllabi for

1. **Course number and name:** PHY-121: Calculus Based Physics I
2. **Credits and contact hours:** 4 Credits and (Monday/Wednesday) 2:30 PM– 4:10 PM
3. **Instructor’s Name:** Abraham Meeles, PhD.
   ISBN-10: 1-94727-1
   Course Websites:
   - webwork.navajotech.edu – (alternate: 74.112.229.60)
   - www.engage.com
   Course websites are used for homework distribution and grades. Any questions please talk to your instructor.
5. **Specific Course Information:**
   a. **Brief description of the content of the course (catalog description)**
      The first semester of this calculus-based two-semester introductory sequence in physics uses the workshop physics method. This approach combines inquiry-based cooperative learning with comprehensive use of computer tools. Topics covered include kinematics, Newton’s laws of motion, rotational motion, and oscillations. The course includes three hours of discovery lab each week. *This course is only offered in the fall semester. Lab fee $125.00*
   b. **Pre-requisites or co-requisites**
      Pre-requisites: MTH-121: College Algebra, MTH-123: Trigonometry, or MTH-150: Pre-Calculus.
   c. **Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.**
      PHY-121: Calculus Based Physics I is a *selected elective* course in the Industrial Engineering program.
6. **Specific goals for the course:**
   a. **Specific outcomes of instruction:**
      After successfully completing this course you will learn:
      - A basic understanding of mechanical physics and knowledge of motion (linear, projectile, circular, oscillatory, and rotational) and the fundamental laws that govern said motions.
      - A basic understanding energy, momentum and impulse and the fundamental laws that govern said concepts.
      - A basic understanding of thermodynamics and the fundamental laws that govern it.
      - A basic understanding of electromagnetism and the laws that govern it.
   b. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.**
7. **Brief list of topics to be covered.**
   - Kinematics
   - Newton’s laws of motion
   - Rotational Motion
   - Oscillations
ABET Course Syllabi for

1. Course number and name: IE-484: Computer Aided Manufacturing & Robotics
2. Credits and contact hours: 4 Credits and (Monday/Wednesday) 9:30 AM–11:00 AM
3. Instructor’s Name: Vincent J. Vohnout, P.E., PhD.
   ISBN-10: 0-13-349961-8
5. Specific Course Information:
   a. Brief description of the content of the course (catalog description)
      This course will introduce the use of computers as a tool to aid in manufacturing, distribution and service environments with computer numerically controlled machines, automated storage systems and robotics.
   b. Pre-requisites or co-requisites
      Pre-requisites: CMP-101: Introduction to Computers
   c. Indicate whether a required, elective, or selected elective (as per Table 5-1) course in the program.
      IE-484: Computer Aided Manufacturing & Robotics is a selected elective course in the Industrial Engineering program.
6. Specific goals for the course:
   a. Specific outcomes of instruction:
      After successfully completing this course you will learn:
      - Students will know the characteristics of the principle types of manufacturing systems.
      - Students will know how various automation methods are applied to manufacturing engineering problems.
      - Students will learn to identify the optimal level of automation to maximize the economic benefit of a manufacturing and related processes.
   b. Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.

<table>
<thead>
<tr>
<th>COURSE OUTCOMES</th>
<th>COURSE MEASUREMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>A strong understanding of principle manufacturing systems.</td>
<td>Complete reading assignments, homework, assignments, exams, projects, and quizzes.</td>
</tr>
<tr>
<td>A strong understanding of automation and robotics as applied to manufacturing and related processes.</td>
<td></td>
</tr>
</tbody>
</table>

*Sum of points of all tests, quizzes and assignments / 400 (course total)*100 = Letter Grade
7. Brief list of topics to be covered.

Coming to the lab:

CT Scanner – Computed Tomography X-ray scanner for plastic parts inspection (ordered)

Instron Tensile/compression tester (new – update) (in process)

Instron Fatigue testing machine (in process)
APPENDIX D – INSTITUTIONAL SUMMARY

1. The Institution
   a. Name and address of the institution

      Navajo Technical University
      Post Office Box 849
      Crownpoint, New Mexico 87313-0849

      (Physical Address: Lowerpoint Road, State Highway 371, Crownpoint, NM)

   b. Name and title of the chief executive officer of the institution

      Dr. Elmer Guy, President of NTU

   c. Name and title of the person submitting the Self-Study Report.

      Harry S. Whiting II, PE, Assistant Professor of Industrial Engineering

   d. Name the organizations by which the institution is now accredited, and the dates of the initial and most recent accreditation evaluations.

      Higher Learning Commission - accredited the Industrial Engineering program; February 21, 2012. They will visit in the Fall of 2017 to renew accreditation.

2. Type of Control
   Description of the type of managerial control of the institution, e.g., private-non-profit, private-other, denominational, state, federal, public-other, etc

   NTU is a public institution owned by the Navajo Nation. It has a Board of Regents appointed by the President of the Navajo Nation with the President of the University being the executive head of the school.
3. Educational Unit

Describe the educational unit in which the program is located including the administrative chain of responsibility from the individual responsible for the program to the chief executive officer of the institution. Include names and titles. An organization chart may be included.

Harry S. Whiting II is supervised by the Department Chair, Gholam Ehteshami. Dr. Ehteshami is subordinated to the Dean of Instruction, Casmir Agbaraji who reports to the President of NTU, Dr. Elmer Guy. An organizational chart for the Navajo Technical University appears on the next page with the Department of Engineering, Math and Technology included.
4. Academic Support Units

Instructors are categorized by the subject areas in which they teach. They may appear in more than one category and have their teaching load listed if they teach less than a full load.

Engineering Subjects:
- Dr. Casmir Agbaraji, Dean of (typically one class per semester)
- Dr. Gholam Resa Ehteshami, Associate Professor of Chemical Engineering (two or three overlapping classes per semester)
- Dr. Frank Stomp, Associate Professor of Information Technology (Computer Science) (teaches one class for Industrial Engineering)
- Harry S. Whiting II, PE, Assistant Professor of Industrial Engineering
- Harold Halliday, Director Center for Digital Technology (one class per semester, supplemental work as Project Coordinator)
- Dr. Vincent Vohnout, Assistant Professor of Advanced Manufacturing Technology
- Elisha Wortham, Assistant Professor of Building Information Modelling

Computer Science Subjects:
- Dr. Frank Stomp, Associate Professor of Information Technology (Computer Science)
- Mark Trebian, Assistant Professor of Information Technology (Computer Science)

Mathematical Subjects:
- Dr. Carlos Paez-Paez, Assistant Professor of Mathematics
- Robert Nacorda, Assistant Professor of Mathematics
- Shasha Han, Assistant Professor of Mathematics

Physics:
- Dr. Abraham Meles, Assistant Professor of Physics

Chemistry:
- Dr. Thiagarajan Soundappan, Assistant Professor of Chemistry

5. Non-academic Support Units

List the names and titles of the individuals responsible for each of the units that provide non-academic support to the program being evaluated, e.g., library, computing facilities, placement, tutoring, etc.

- Heather Kinalacheeny, Head of the STEAM LAB, tutoring services
- Clyde Hendersen, Head Librarian
- Coleen Arviso, Head of Online Learning and Moodle Lab
- Juanita Tom, Head of Placement Services
- Lemanuel Loley, Head of Job Placement Services
6. Credit Unit

One semester credit hour represents one class hour or three laboratory hours per week.

One academic year is composed of 30 weeks of classes, exclusive of final examinations.

7. Tables

Complete the following tables for the program undergoing evaluation.
Table D-1. Program Enrollment and Degree Data

Industrial Engineering

<table>
<thead>
<tr>
<th>Academic Year</th>
<th>Enrollment Year</th>
<th>Total Undergrad</th>
<th>Total Grad</th>
<th>Degrees Awarded</th>

</tbody>
</table>

Give official fall term enrollment figures (head count) for the current and preceding four academic years and undergraduate and graduate degrees conferred during each of those years. The "current" year means the academic year preceding the on-site visit.

FT--full time
PT--part time
### Table D-2. Personnel

**Industrial Engineering**

Year\(^1\): Fall 2016

Report data for the program being evaluated.

1. Data on this table should be for the fall term immediately preceding the visit. Updated tables for the fall term when the ABET team is visiting are to be prepared and presented to the team when they arrive.

2. Persons holding joint administrative/faculty positions or other combined assignments should be allocated to each category according to the fraction of the appointment assigned to that category.

3. For faculty members, 1 FTE equals what your institution defines as a full-time load.

4. For student teaching assistants, 1 FTE equals 20 hours per week of work (or service). For undergraduate and graduate students, 1 FTE equals 15 semester credit-hours (or 24 quarter credit-hours) per term of institutional course work, meaning all courses — science, humanities and social sciences, etc.

5. Specify any other category considered appropriate, or leave blank.
Signature Attesting to Compliance

By signing below, I attest to the following:

That _Industrial Engineering_ has conducted an honest assessment of compliance and has provided a complete and accurate disclosure of timely information regarding compliance with ABET’s Criteria for Accrediting Engineering Programs to include the General Criteria and any applicable Program Criteria, and the ABET Accreditation Policy and Procedure Manual.

_Casmir Agbaraji, PhD_
Dean’s Name (As indicated on the RFE)
